# **Section 1: Executive Summary**

## **Process and Methods**

This community health needs assessment brings together a variety of demographic and health data and information, gathered from both primary and secondary data sources.

The first phase of the community health needs assessment involved collection and analysis of numerous demographic and health status and data and information for Methodist Hospital Service Area and Service Planning Area (SPA) 3 – San Gabriel Valley. The following types of data were analyzed: population, household and family demographics; birth statistics, death statistics, designated Health Professional Shortage Areas, large-scale household telephone surveys designed to measure health access, utilization of health services, and health behaviors. Wherever possible, the SPA 3 or Los Angeles County health experience was benchmarked to Healthy People 2020 objectives. In addition, to assist with providing context to the demographics, Methodist Hospital Service Area is compared to Los Angeles County.

The second phase of the needs assessment focused on qualitative primary research. Representatives from Methodist Hospital agreed that telephone interviews with health department contacts and representatives from public and private organizations would be a cost-effective approach to gain an understanding of important health issues and potential opportunities to collaborate with these organizations.

## **Service Area Determination**

Note: Determination of service area updated based on 2018 inpatient origin analysis

Methodist Hospital used the Stark II definition – the lowest number of contiguous ZIP Codes from which the hospital draws at least 75 percent of its inpatients – to determine its geographic service area for purposes of the 2019 community health needs assessment. Using hospital data, there were 20 ZIP Codes from which the hospital drew 75 percent its admissions.

# Service Area Definition and Description

*Note: Methodist Hospital is located in Arcadia ZIP Code 91007*

The service area population (2019) is estimated at 783,391. The population in the service area is forecast to increase 2.5 percent in the next five years, to 803,197. Growth projections for households and families are estimated to increase 2.7 percent and 2.6 percent, respectively. The following table summarizes the service area population, households, and families as well as the percent change projected for 2024 (over a five-year period).

## Summary of Population, Households and Families

Methodist Hospital Service Area

2019

Description	Number		Percent Change From 2019 to 2024
	2019	2024	
<b>Demographics</b>			
Population	783,391	803,197	2.5%
Households	239,799	246,228	2.7%
Families	181,375	186,090	2.6%

Source: Claritas

To assist with providing context to the service area demographics, key statistics are compared to Los Angeles County for 2019 in the following table. Of note, in comparison to Los Angeles County, Methodist Hospital service area has a **higher** proportion of:

- Persons age 55 years and older
- Persons of Asian race
- Persons speaking an Asian or Pacific Island language
- Persons 16 years and older not in the labor force
- Households with 3 or more persons
- Households with children under 18 years of age
- Owner-occupied households

### Summary of Demographic Highlights

Methodist Hospital Service Area Compared to Los Angeles County

2019

Indicator	Percent	
	Service Area	LA County
<b>5-Year Change (2019 to 2024)</b>		
Population	2.5%	3.0%
Households	2.7%	3.1%
Families	2.6%	3.0%
<b>Age Group</b>		
0 to 4 Years	5.8%	6.1%

## Health Access and Utilization

Note: Findings are based on the 2017 California Health Interview Survey for SPA 3

When comparing health access and utilization indicators in SPA 3 to Healthy People 2020 objectives, SPA 3 did not meet the objectives related to: medical insurance for persons under age 65 (insured all of part of the year), usual source of ongoing care, and delays in getting medical care.

### Summary of Health Access and Utilization Indicators

SPA 3 Compared to Healthy People 2020 Objectives

2017

Indicator	Healthy People 2020 Objective	SPA 3 San Gabriel Valley
<b>Health Access</b>		
Insured All or Part of Year Age 0 to 64 Years	100%	94%
Usual Source of Ongoing Care All Ages	95%	87%
Delays in Getting Medical Care All Ages	4.2%	9.1%

Source: UCLA Center for Health Policy Research

# Mortality

Note: Findings are based on deaths among residents of the service area in 2016 and three-year averages of deaths that occurred among residents of Los Angeles County during 2015 through 2017

In 2016, there were 4,910 deaths in Methodist Hospital service area. Heart disease and cancer were the top two leading causes of death in the service area, accounting for 50 percent of all deaths. Of note, coronary heart disease is not only the leading cause of death in Methodist Hospital Service Area (2016) but was also the leading cause of premature death in Service Planning Area 3 (2013). Other leading causes of death in the service area are summarized in the table below.

### Profile of Deaths, Ranked By Select Leading Causes of Death

Methodist Hospital Service Area

2016

Select Leading Cause of Death	Number	Percent
Heart Disease	1,237	25.2%
Cancer (All Types)	1,214	24.7%
Stroke	291	5.9%
Alzheimer's disease	285	5.8%
Chronic Lower Respiratory Disease	268	5.5%
Influenza and Pneumonia	203	4.1%
Diabetes	197	4.0%
Unintentional Injuries (All Types)	178	3.6%
Chronic Liver Disease and Cirrhosis	106	2.2%
Essential Hypertension & Hypertensive Renal Disease	101	2.1%
Nephritis, Nephrotic Syndrome and Nephrosis	70	1.4%
Suicide	49	1.0%
All Other	711	14.5%
<b>All Causes of Death</b>	<b>4,910</b>	<b>100.0%</b>

Source: California Department of Public Health

When comparing age-adjusted death rates in Los Angeles County to Healthy People 2020 objectives, Los Angeles County experienced lower death rates in all leading causes of death than the stated target rates, with the exceptions of homicide and chronic liver disease and cirrhosis.

### Summary of Age-Adjusted Death Rates by Cause of Death

Los Angeles County Compared to Healthy People 2020 Objectives

Three-Year Average (2015 to 2017)

Indicator	Healthy People 2020 Objective	Los Angeles County
<b>Health Status</b>		
Coronary Heart Disease	103.4	101.7
Stroke	34.8	34.0
Cancer (All Sites)	161.4	132.8
Lung	45.5	24.8
Colorectal	14.5	13.1
Prostate	21.8	19.2
Female Breast	20.7	18.5
Chronic Pulmonary Diseases	None	28.2
Influenza/Pneumonia	None	18.7
Diabetes	N/A	22.9
Unintentional Injuries (All Types)	36.4	23.7
Motor Vehicle Accidents	12.4	7.9
Homicide	5.5	6.1
Alzheimer's disease	None	35.6
Suicide	10.2	8.0
Chronic Liver Disease and Cirrhosis	8.2	13.2

*Notes:*

*Rates are per 100,000 persons and are standardized to the 2000 U.S. Standard Million population  
Healthy People 2020 Chronic pulmonary disease death rate is for the population age 45 years and older; data for the entire population is not comparable*

*Healthy People 2020 objective is based on both underlying and contributing cause of death which requires use of multiple cause of death files; California's data exclude multiple/contributing causes of death*

*Source: California Department of Public Health*

# Maternal and Infant Health

Note: Findings are based on live births that occurred in Methodist Hospital service area during 2015 to 2017, three-year averages of pregnancy and birth outcomes that occurred among residents of Los Angeles County during 2015 to 2017, and three-year averages of infant mortality during 2014 to 2016

On average, there were 9,352 live births a year in Methodist Hospital’s service area during the three-year period from 2015 through 2017.

### Number of Live Births

Methodist Hospital Service Area  
*Three-Year Average (2015 to 2017)*

Year	Number of Births
2015	9,563
2016	9,506
2017	8,986
<b>Three-Year Average</b>	<b>9,352</b>

Source: California Department of Public Health

When comparing maternal and infant health indicators in Los Angeles County to Healthy People 2020 objectives, Los Angeles County met all of the objectives.

### Summary of Maternal and Infant Health Indicators

Los Angeles County Compared to Healthy People 2020 Objectives  
*Three-Year Averages (2015 to 2017) and (2014 to 2016)*

	Healthy People 2020 Objective	Los Angeles County
<b>Pregnancy/Birth Outcomes</b>		
Early Prenatal Care	77.9%	84.8%
Low Birth Weight Infants	7.8%	7.2%
<b>Infant Outcomes (2014 to 2016)</b>		
Infant Mortality	6.0	4.3

Source: California Department of Public Health

# Adult Health

Note: Findings are based on 2017 California Health Interview Survey for SPA 3

When comparing adult health indicators in SPA 3 to Healthy People 2020 objectives, though SPA 3 did not meet the health access objectives related to medical insurance (insured all or part of the year) and usual source of ongoing care, SPA 3 did meet the objectives for all stated targets regarding health behaviors.

**Summary of Adult Health Indicators**  
SPA 3 Compared to Healthy People 2020 Objectives  
2017

Indicator	Healthy People 2020 Objective	SPA 3 San Gabriel Valley
<b>Health Access</b>		
Insured All or Part of Year	100%	91%
Usual Source of Ongoing Care	89.4%	83.3%
<b>Health Behaviors</b>		
Healthy Weight	33.9%	42.9%
Obese	30.5%	22.3%
Diagnosed with High Blood Pressure	26.9%	21.7%
Currently Smoke Cigarettes	12.0%	9.3%

Source: UCLA Center for Health Policy Research

## Senior Health

Note: Findings are based on 2017 and 2016 California Health Interview Survey for SPA 3

When comparing senior health indicators in SPA 3 to Healthy People 2020 objectives, SPA 3 did not meet the objectives related to flu shot received in past year, healthy weight, and diagnosed with high blood pressure.

**Summary of Senior Health Indicators**  
SPA 3 Compared to Healthy People 2020 Objectives  
2017 and 2016

Indicator	Healthy People 2020 Objective	SPA 3 San Gabriel Valley
<b>Health Access (2016)</b>		
Flu Shot in Past Year	90%	67%
<b>Health Behaviors</b>		
Healthy Weight	33.9%	35.8%
Diagnosed with High Blood Pressure	26.9%	67.9%

Source: UCLA Center for Health Policy Research

## Community Consultation

Note: Findings are based on surveys and interviews with community leaders and representatives of public organizations in the San Gabriel Valley conducted over a five-week period beginning in mid-September 2019.

See Section 10: Community Consultation for detailed findings.

Several of those interviewed complimented Methodist Hospital on its efforts to provide healthcare services to the community, commenting that “the Hospital is doing a lot now” and “doing a great job with community outreach and cancer awareness programs” through efforts such as participation in health fairs and partnerships with area community and senior centers.

The following were identified as the community’s top health issues (based on frequency of overall mention):

- Access to health services and continuity of care
  - Lack of health insurance and cost of care
  - Insurance plans accepted by providers
  - Cost and timeliness of obtaining services and medications
  - Use of 911 and hospital emergency rooms
  - Difficulties receiving ongoing care due to lack of transportation, language barriers, costs of services and medications, and long wait times
  - Difficulties navigating the healthcare system
  - Lack of awareness of availability of needed health services
  - Shortage of specialty physicians

- Health conditions and disability

Many of those interviewed identified the importance of health awareness, education, disease prevention, and medications management. In addition, several of those interviewed during the community consultation highlighted challenges related to age (older adults), gender, race/ethnicity, and cultural and generational differences in managing health conditions and disabilities. The following health conditions were specifically identified as particularly prevalent across the community:

- Diabetes
- High blood pressure
- Heart disease and stroke
- Cancer

- Mental health and dementia
- Influenza and pneumonia (seasonal emphasis)

According to many of those interviewed, persons of all ages across the greater San Gabriel Valley, regardless of income or racial/ethnic and cultural backgrounds are affected by these health issues.

Specific demographic sectors most affected and identified by the interviewees:

- Lower socioeconomic status
- Lower educational attainment
- Chinese immigrant families with limited English proficiency
- Spanish-speaking persons
- Racial and ethnic minorities – Asians, Latinos, and African Americans

Participants in the community consultation identified specific actions that could be undertaken to address health issues, including:

*Access to Health Services and Continuity of Care*

- Financial assistance (including reduced costs)
- Reduced paperwork and duplication
- More effective and efficient coordination of community resources for vulnerable communities
- Reduce defensive medicine that is practiced in response to medical liability issues
- Use of health navigators
- Improve access to care e.g., transportation and language services
- Public education on topics such as financial assistance and insurance copayments/deductibles

*Health Conditions and Disability*

- Additional partnering of healthcare organizations with community organizations to bring needed programs and services to community places
- Identify and address root causes of health conditions and disability
- Promote awareness of healthy lifestyles, including staying physically active, eating properly, flu shots, stress management, and when to go to the doctor
- Provide communication on when and what cancer sites to be screened for
- Increase awareness of supplemental food programs for school-age children
- Reach out to underserved geographic areas in the San Gabriel Valley
- More information, education, health fairs, and events in Chinese (e.g., speaking engagements, seminars, workshops, health newsletters, and websites)
- Outreach and materials that are culturally sensitive to the Asian community

- Additional community outreach to PTAs, work places, and churches/temples
- Conduct more activities consistent with healthcare awareness calendar
- More opportunities in the community to check blood pressure
- Additional psychosocial support for cancer patients, families, and caregivers
- Provide mental health services that address prevention, healing, and stress management

Participants in the community consultation offered the following suggestions for collaborative roles or actions for Methodist Hospital:

- Recruit more staff, liaisons, and volunteers that speak Mandarin
- Offer assistance with health insurance plan signups
- Increase outreach to women
- Offer comprehensive women's health services to include physical, mental, dental, and preventive care (e.g., mammograms, osteoporosis, pap smears)
- Continue outreach to senior centers to address health conditions and disability
- Partner more with government, non-profits, and community organizations
- Increase efforts to identify individuals with high blood pressure
- Offer diabetes clinics
- Provide education and awareness programs to prepare patients for physician visits, use of emergency rooms, and paramedics (911)
- Better electronic communication with other healthcare entities to reduce unnecessary efforts
- Offer telemedicine services
- Provide in-home post hospital follow-up services (by nurse practitioners and physician assistants)

*Specific to Cancer:*

- Transportation services
- Resources in various languages
- Interpreters
- Patient navigators, nurses, MDs, and social workers to address full spectrum of care
- Education and awareness programs for various cancer sites, such as breast, colorectal, gynecological
- Low cost or free cancer screenings for a limited number of people (such as first 100 people)
- Cancer Resource Center to provide information about financial assistance programs and foundations

## **Process and Criteria Used**

In preparing the community health needs assessment, Methodist Hospital combined quantitative data about service area demographics, availability of health insurance, health access to and utilization of key services, health status, and health behaviors with qualitative data, including opinions from community leaders regarding important health issues.

The following criteria were used to identify and prioritize significant health needs in the community:

- Healthy People 2020 metrics
- Number of persons affected
- Identification and/or validation as an important health issue by community leaders
- Identified by community organizations as an opportunity to work collaboratively to address health issue

## **Significant Priority Health Needs Identified**

- Access to health services and continuity of care
- Disease prevention and health promotion

## **Health Facilities and Other Resources**

The following health facilities and other resources are located in the ZIP codes of Methodist Hospital's service area:

- 12 open hospitals (ten general acute care hospitals and two acute psychiatric hospitals)
- 29 licensed free and community clinics
- 2 licensed rehabilitation centers (specialty clinics)
- 12 senior centers

## **Section 2: Process and Methods**

This section includes:

---

- Description of secondary data and information
- Description of analytical methods applied
- Identification of information gaps
- Summary of process for community consultation
- Identification of third party contractor

## **Demographics and Health Data and Information**

This community health needs assessment brings together a variety of demographic and health information, gathered from both primary and secondary data sources.

The first phase of the community health needs assessment involved collection and analysis of numerous demographic and health status and data and information for Methodist Hospital Service Area and Service Planning Area (SPA) 3 – San Gabriel Valley. The following types of data were analyzed: population, household and family demographics; birth statistics, death statistics, designated Health Professional Shortage Areas, large-scale household telephone surveys designed to measure health access, utilization of health services, and health behaviors. Wherever possible, the SPA 3 or Los Angeles County health experience was benchmarked to Healthy People 2020 objectives. In addition, to assist with providing context to the demographics, Methodist Hospital Service Area is compared to Los Angeles County.

The second phase of the needs assessment focused on qualitative primary research. Representatives from Methodist Hospital agreed that telephone interviews with health department contacts and representatives from public and private community organizations would be a cost effective approach to gain an understanding of important health issues and potential opportunities to collaborate with these organizations.

### **Sources of the Data**

The following sources of data and information were used in this community health needs assessment:

- California Department of Education
- California Department of Public Health
- Center for Social Sciences Research at University of California at Berkeley
- Los Angeles County Department of Public Health
- Los Angeles Homeless Services Authority
- Los Angeles County 211.com
- Claritas
- Office of Statewide Health Planning and Development
- UCLA Center for Health Policy Research
- United States Department of Health and Human Services

### **Dates of the Data**

All data and information reviewed in the community health needs assessment used the most recent available. The table on the next page summarizes the dates of the data used.

## Dates of the Data Used in the Community Health Needs Assessment

Description	Date of Data

High School Dropouts	2017/2018 School Year
Child Abuse and Neglect	2018
Health Care Facilities and Resources	Year End 2018

### **Analytical Methods Applied**

In many instances, health status information is based on multiple years of data and was used to establish three-year averages for the service area. Widely accepted demographics and health measurements – such as persons with average household size and income, health insurance coverage, healthy weight and obesity, age-adjusted death rates, low birth weight infants, and pregnant women with early entry into prenatal care – were used in this community health needs assessment. To assist with prioritization of health issues, secondary data and information is benchmarked to Healthy People 2020 national objectives.<sup>1</sup> In addition, comparisons to local, regional, and state figures are applied.

### **Information Gaps**

Information gaps were most apparent in the following areas:

- Availability of local (ZIP Code) data on maternal births (e.g., age group of mother, race/ethnicity of mother), birth outcomes (e.g., early prenatal care and infant birth weights), and infant outcomes (e.g., infant mortality)

---

<sup>1</sup> Prepared by the U.S. Department of Health and Human Services, Healthy People 2020 outlines a nationwide agenda focused on promoting health and preventing illness, disability, and premature death. Healthy People 2020 builds on initiatives pursued over the past three decades.

- Availability of local (ZIP Code) data on mortality (e.g., number of deaths by age group for leading causes of death such as coronary heart disease, stroke and cancer)
- Statistically reliable health data by age groups (such as children, adults, and seniors) in the service area
- Statistically reliable health data by race/ethnicity in the service area
- Comprehensive data validating mental health and substance abuse issues identified in the community consultation

## **Community Consultation**

### **Process**

Methodist Hospital identified a diversified list of contacts – including public health department contacts, representatives from community organizations, business leaders, and physicians with knowledge of specific race/ethnic groups – for participation in the telephone interviews for the Community Health Needs Assessment. Each person was then invited via phone, mail, and/or email, to participate in the community consultation. Upon agreement to participate, individuals were sent a letter confirming participation, via email. The letter included an overview of the community consultation, the questions to be asked, and a hospital contact for any questions or comments. In the next few weeks, the project consultant scheduled and completed telephone interviews with contacts.

### **Third Party Contractor**

Methodist Hospital retained Debbie N. Alpers (previously DNA and Company, Inc.) to prepare this Community Health Needs Assessment. Methodist Hospital has worked with Ms. Alpers since 1998 to conduct a triennial community needs assessment, in compliance with California Senate Bill 697, community benefits legislation. Following the enactment of Senate Bill 697 in 1994, Ms. Alpers was endorsed by the Healthcare Association of Southern California (HASC) to assist its member hospitals in the design and completion of service area specific community needs assessments. In the seven cycles of needs assessments that began in 1995, Ms. Alpers has completed over seventy hospital needs assessments, in addition to assessments conducted for health care organizations and clinics.

## **Section 3: Service Area Definition and Demographics**

This section includes:

---

- Description of how the service area was determined
- Definition of Methodist Hospital Service Area
- Demographics of Methodist Hospital Service Area, including population, household and family characteristics
- Description of the homeless population in SPA 3
- Comparison of the Methodist Hospital Service Area demographics to Los Angeles County

Detailed information – at the ZIP Code level – can be found in:

---

- Appendix A: Service Area Description
- Appendix B: Age Group Detail

## Determination of Service Area for Purposes of the Needs Assessment

Methodist Hospital used the Stark II definition – the lowest number of contiguous ZIP Codes from which the hospital draws at least 75 percent of its inpatients – to determine its geographic service area for purposes of the 2019 community health needs assessment. Using hospital data, there were 20 ZIP Codes from which the hospital drew 75 percent its admissions.

## Definition of Service Area for Purposes of the Needs Assessment

For purposes of the 2019 Community Needs Assessment, Methodist Hospital defined its service area to include the following ZIP codes/communities.

### Service Area Definition

Methodist Hospital Service Area

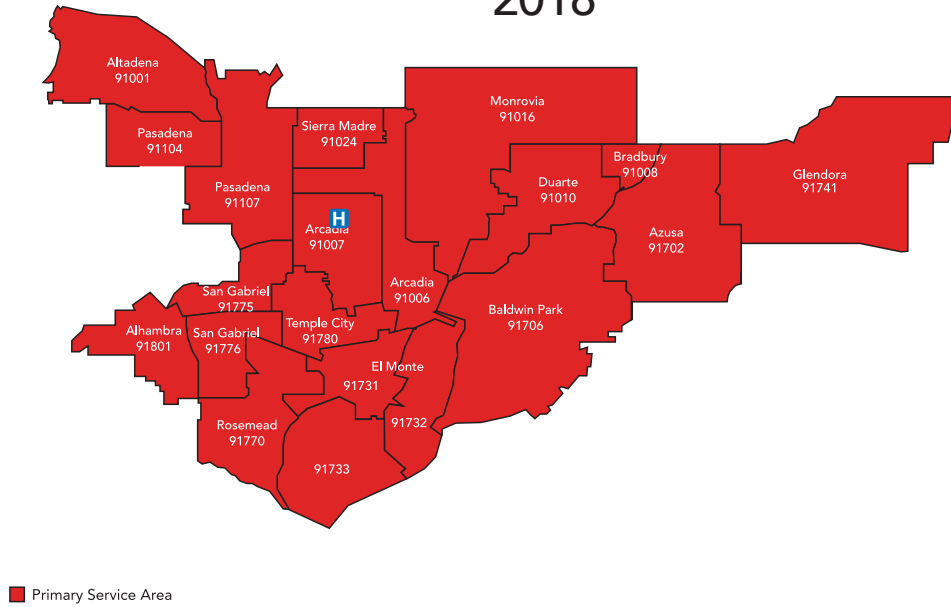

2019

ZIP Code	Community
91006	Arcadia
91007	Arcadia
91008	Bradbury
91010	Duarte
91016	Monrovia
91024	Sierra Madre
91001	Altadena
91104	Pasadena
91107	Pasadena
91702	Azusa
91706	Baldwin Park
91731	El Monte
91732	El Monte
91733	South El Monte
91741	Glendora
91770	Rosemead
91775	San Gabriel
91776	San Gabriel
91780	Temple City
91801	Alhambra

# METHODIST HOSPITAL SERVICE AREA 2018

MH19-0220

# Population

**What's Being Measured** The service area population for estimated 2019 and projected 2024.

**How the Measure is Defined** The number of persons living in the service area. The change in number of persons is calculated by subtracting the estimated 2019 population from the projected 2024 population. The change in percent is calculated the dividing the change in number of persons by the 2019 population.

## **Race/Ethnicity**

**What's Being Measured** Race/ethnicity for the population.

**How the Measure is Defined** There are no universally accepted definitions for race and Hispanic ethnicity. The Census currently defines “Hispanic or Latino” as an ethnicity, not a race. In the race question for Census 2010, the option of marking one or more race categories was given. People who marked only one race are referred to as the race alone population. Those who marked more than one race are referred to as the two or more races population. All respondents who marked more than one race are collapsed into this category. The question on Hispanic origin asked respondents if they are Spanish, Hispanic or Latino.

The following eight race/ethnicity groupings are used: (1) White is non-Hispanic White and includes persons having origins in any of the original peoples of Europe, the Middle East, or North Africa. It includes people who indicate their race as “White” or report entries such as Irish, German, Italian, Lebanese, Near Easterner, Arab or Polish. (2) Black is non-Hispanic Black and includes persons having origins in any of the Black racial groups of Africa. It includes people who indicate their race as “Black or African American” or provide written entries such as African American, Kenyan, Nigerian or Haitian. (3) American Indian and Alaskan Native is non-Hispanic American Indian and Alaskan Native and includes persons having origins in any of the original peoples of North and South America (including Central America) and who maintain tribal affiliation or community attachment. (4) Asian is non-Hispanic Asian and includes persons having origins in any of the original peoples of the Far East, Southeast Asia, or the Indian subcontinent, including, for example, Cambodia, China, India, Japan, Korea, Vietnam, Malaysia, Pakistan, the Philippine Islands, and Thailand. It includes people who provide written entries such as Asian Indian, Chinese, Filipino, Korean, Japanese, Vietnamese, and other Asian. (5) Native Hawaiian/Pacific Islander is non-Hispanic Native Hawaiian/Pacific Islander and includes persons having origins in Hawaii, Guam, Samoa, or other Pacific Islands. (6) Hispanic is Hispanic or Latino and includes the total of all those who identified themselves as Hispanic or Latino. (7) Some Other Race is non-Hispanic some other race and includes all other responses not included in the categories above. (8) Two or More Races is non-Hispanic two or more races.

The sum of these eight race/Hispanic ethnicity categories is the 2019 total population.

## Employment Status for Persons 16 Years and Older

**What's Being Measured** Employment status for persons age 16 years and older.

**How the Measure is Defined** Employment status is grouped into the following four categories: (1) persons in the labor force and employed, (2) persons in the labor force and unemployed (e.g., not at work and were looking for work and available to accept a job), (3) persons in the armed forces serving active duty with the United States Army, Air Force, Navy, Marine Corps or Coast Guard, and (4) persons who are not classified as members of the labor force (consists mainly of students, housewives, retired workers, seasonal workers enumerated in an off season who were not looking for work, institutionalized persons, and persons doing only incidental unpaid family work). The sum of these four groupings for employment status is the 2019 population age 16 years and older.

# Occupation Type for Employed Labor Force

**What's Being Measured** Occupation classification of employed labor force.

**How the Measure is Defined** Occupations are grouped into the following three types: (1) white collar (includes occupations of management/business/financial operations, professional and related occupations, sales and office), (2) blue collar (includes occupations of construction and transportation/material moving), and (3) service and farming. The sum of these three categories is 2019 employed labor force.

# Households

**What's Being Measured** Households in the service area for estimated 2019 and projected 2024.

**How the Measure is Defined** A household is considered a housing unit, occupied by either a single person or two or more related or unrelated persons. Units occupied by ten or more unrelated individuals are called group quarters, not households. The change in number of households is calculated by subtracting the estimated 2019 households from the projected 2024 households. The change in percent is calculated the dividing the change in number of households by the 2019 households.

## **Service Area Experience**

## Group Quarters Population by Type

**What's Being Measured** The population living in group quarters.

**How the Measure is Defined** Group quarters is a type of residence inhabited by ten or more persons, unrelated to the householder and includes the following seven types: (1) college/university student housing, (2) military quarters, (3) other non-institutional facilities, (4) correctional facilities for adults, (5) juvenile facilities, (6) nursing home, and (7) other institutional facilities. The sum of these group quarters types is the 2019 population living in group quarters.

## Persons Per Household and Average Household Size

**What's Being Measured** Persons per household and average household size.

**How the Measure is Defined** The number of households is reported for the following seven categories: 1-person households, 2-person households, 3-person households, 4-person households, 5-person households, 6-person households, and 7 or more person households. The sum of these various person households is the 2019 total households. Average household size is calculated by dividing the total population living in households by the total number of households.

# Households by Presence of Children Under 18 Years of Age

**What's Being Measured** Households are described by the presence of one or more persons under 18 years of age (children) living in the household.

**How the Measure is Defined** Households with children living in the household may include married couple families, families with male householders (no wives), families with female householders (no husbands), and non-family households. The sum of these two household descriptions is the 2019 total households.

## Service Area Experience

# Households by Income Group and Average Household Income

**What's Being Measured** Households in various income groupings.

**How the Measure is Defined** Household income includes the total money received in the stated calendar year by all household members 15 years and older. The income is presented in terms of current dollars for 2019. The number of households with an annual household income is reported for the following 12 income groups: (1) under \$15,000 (2) \$15,000 to \$24,999 (3) \$25,000 to \$34,999 (4) \$35,000 to \$49,999 (5) \$50,000 to \$74,999 (6) \$75,000 to \$99,999 (7) \$100,000 to \$124,999 (8) \$125,000 to \$149,999 (9) \$150,000 to \$199,999 and (10) \$200,000 to \$249,999 (11) ) \$250,000 to \$499,999 and (12) \$500,000 and over. The sum of households with these 12 income groupings is the 2019 households. Average household income is calculated the dividing the total income of an area by the number of households in the area.

## Households by Age of Head of Household

**What's Being Measured** The number of households by age group of the head of household.

**How the Measure is Defined** The head of households is reported for the following eight age groups: (1) 15 to 24 years, (2) 25 to 34 years, (3) 35 to 44 years, (4) 45 to 54 years, (5) 55 to 64 years, (6) 65 to 74 years, (7) 75 to 84 years, and (8) 85 years and older. The sum of the households headed by persons in these age groups is the total 2019 households.

# Owner-Occupied and Renter-Occupied Housing Units

**What's Being Measured** Owner-occupied housing units and renter-occupied housing units for estimated 2019.

**How the Measure is Defined** A housing unit is owner-occupied if the owner or co-owner lives in the unit. All occupied housing units that are not owner-occupied, whether they are rented for cash rent or occupied without payment of cash rent, are classified as renter-occupied (units may be provided free of rent by friends or relatives in exchange for services, such as resident manager, caretaker, or tenant farmer). Housing units on military bases are also classified in the “no cash rent” category. The sum of owner-occupied housing units and renter-occupied housing units is the total occupied housing units.

## Service Area Experience

# Families

**What's Being Measured** The number of families (family households) for estimated 2019 and projected 2024.

**How the Measure is Defined** A family household consists of a householder and one or more other persons living in the same household who are related to the householder by birth, marriage or adoption. All persons who are related to the householder are regarded as members of his or her family. The change in number of families is calculated by subtracting the estimated 2019 families from the projected 2024 families. The change in percent is calculated the dividing the change in number of families by the 2019 families.

# Homeless Population

**What's Being Measured** Count of homeless population.

**How the Measure is Defined** To accurately enumerate the homeless population in Los Angeles County, a point-in-time census was conducted during the last ten days of January 2019, with the support of volunteers, partners and community service providers. In this study, the U.S. Department of Housing and Urban Development's definition of homelessness was used. The definition is an individual who lacks a fixed, regular and adequate nighttime residence and an individual who has a primary nighttime residence that is a supervised publicly or privately operated shelter designed to provide temporary living accommodations or an institution that provides a temporary residence for individuals intended to be institutionalized or a public or private place not designated for, or ordinarily used as, a regular sleeping accommodation for human beings.

According to Los Angeles Homeless Service Authority (LAHSA), rising homelessness is a statewide challenge, with the affordable housing crisis driving a regional increase in homelessness.

	Target Not Met
	Result is Statistically Unstable

Listing of Health Care Facilities located in Methodist Hospital Service Area can be found in:

---

- Section 12: Health Facilities and Other Resources

# Health Professional Shortage Areas

**What's Being Measured** The federal Health Professional Shortage Area (HPSA) identifies areas having a shortage of primary care health care providers.

**How the Measure is Defined** Primary care HPSA is decided on the basis of availability of primary care physicians. Criteria is based on practitioner ratios and the presence of barriers to access such as travel distance. These designations are established by Medical Service Study Areas (MSSA), geographical areas based upon U.S. Census tracts; MSSAs are reassessed every decade following the U.S. Census.

## Service Area Experience

### Primary Care Health Professional Shortage Areas

Medical Service Study Areas in Service Area  
2019

Medical Service Study Area (MSSA)	Primary Care Health Professional Shortage Area
Arcadia Central and Northeast/Bradbury/Monrovia/Sierra Madre (78.2xxx)	
Arcadia Southeast/San Gabriel North (78.2ddd)	
Altadena East/Azusa North/Duarte North/Glendora/Pasadena East (78.2gggg)	
El Monte (78.2oo)	▲
Rosemead/San Gabriel South/South El Monte West/Temple City West (78.2qqq)	
Baldwin Park/Irwindale (78.2zzz)	▲

Note:

▲ Indicates that Medical Service Study Area is a designated shortage area

# Medical Insurance

**What's Being Measured** Persons under age 65 years with medical insurance the entire past year or only part of the past year.

**How the Measure is Defined** The percentage of persons with health insurance includes persons with employment-based insurance, Medi-Cal or Healthy Families programs, privately purchased health insurance or other insurance. Insured persons include those with health insurance for all or part of the year. Results are from the 2017 California Health Interview Survey.

**Why the Measurement is Helpful** Health insurance coverage is a key component of access to health care. Studies show that people with health insurance coverage report fewer access problems than those who are uninsured.

**Healthy People 2020 Objective** Increase the proportion of persons under age 65 years with medical insurance to 100%.

## Service Area Experience

**Measurement Period** 2017

94% of persons age 0 to 64 years with medical insurance

**Source of Data** UCLA Center for Health Policy Research

# Source of Ongoing Care

**What's Being Measured** Persons of all ages with a specific source of ongoing care

**How the Measure is Defined** Specific sources of ongoing care may include any of the following: doctor's office/HMO/Kaiser, community, government or hospital clinic, emergency room/urgent care, health center facility, or some other place. Results are from the 2017 California Health Interview Survey.

**Why the Measurement is Helpful** Access to care depends in part on access to an ongoing source of care. People with a usual source of health care are more likely than those without a usual source of care to receive a variety of preventive health care services. An estimated 15 percent of adults in the US lack a usual source of care; an estimated 7 percent of children age 17 years and under lack a specific source of ongoing care. Uninsured persons under age 65 years are more likely to lack a usual source of care than those who have either public or private health insurance.

**Healthy People 2020 Objective** Increase the proportion of persons of all ages who have a specific source of ongoing care to 95.0%

Note: The Healthy People 2020 objective excludes emergency rooms as a usual source of care.

## **Service Area Experience**

**Measurement Period** 2017

87% with a specific source of ongoing care

**Source of Data** UCLA Center for Health Policy Research

# Delays in Getting Medical Care

**What's Being Measured** Persons of all ages who reported delays in getting needed medical care.

**How the Measure is Defined** Respondents were asked if they experienced any delays or did not get needed medical care (doctor, specialist or other health professional). Results are from the 2017 California Health Interview Survey.

**Why the Measurement is Helpful** Utilizing appropriate clinical and preventive services in a timely fashion can have important implications on the progression and treatment of many diseases. Individuals who receive services in a timely manner have greater opportunity to prevent disease or detect disease during earlier, treatable stages. A delay of necessary care can lead to an increased risk of complications.

**Healthy People 2020 Objective** Reduce the proportion of persons who are unable to obtain or delay in obtaining necessary medical care to 4.2%

## Service Area Experience

**Measurement Period** 2017

9.1% experienced delays in getting needed medical care

**Source of Data** UCLA Center for Health Policy Research

# Delays in Getting Prescription Medications

**What's Being Measured** The proportion of persons who reported delays or didn't get prescription medicines.

**How the Measure is Defined** Respondents were asked if they experienced any delays or did not get needed medicines that a doctor prescribed. Results are from the 2017 California Health Interview Survey.

**Why the Measurement is Helpful** Utilizing appropriate clinical and preventive services in a timely fashion can have important implications on the progression and treatment of many diseases.

**Healthy People 2020 Objective** Reduce the proportion of all persons of who are unable to obtain or delay in obtaining necessary prescription medicines to 2.8%

## Service Area Experience

**Measurement Period** 2017

5.2% experienced delays in getting prescription medications

**Source of Data** UCLA Center for Health Policy Research

# Mammogram In Past Two Years

**What's Being Measured** Females age 50 to 74 years who had a mammogram in the past two years.

**How the Measure is Defined** Females were asked “Have you ever had a mammogram?” and if yes, asked “How long ago did you have your most recent mammogram?” Results are from the 2016 California Health Interview Survey.

**Why the Measurement is Helpful** Healthy People 2020 uses the U.S. Preventative Services Task Force (USPSTF) guidelines to measure this objective and the current USPSTF recommendation includes biennial mammography for women aged 50 to 74 years, with an additional recommendation that starting biennial mammography before age 50 should be an individual decision considering patient context, including a patient’s beliefs regarding possible benefits and harms. Although mammograms do not detect all cases of breast cancer, mammograms have been shown to increase early detection, thus reducing mortality.

**Healthy People 2020 Objective** Increase the proportion of women age 50 to 74 years who received a mammogram in the past two years to 81.1%.

## Service Area Experience

**Measurement Period** 2016

88.2% of females age 50 to 74 years had a mammogram in past two years

**Source of Data** UCLA Center for Health Policy Research

## Summary of Health Access and Utilization Indicators and Comparison to Healthy People 2020 Targets

Note: Findings are based on 2017 California Health Interview Survey for SPA 3 (health access) and 2016 California Health Interview Survey for SPA 3 (health utilization)

When comparing health access and utilization indicators in SPA 3 to Healthy People 2020 objectives, SPA 3 did not meet the objectives related to: medical insurance for persons under age 65 (insured all of part of the year), usual source of ongoing care, and delays in getting medical care. The SPA experience compared to Healthy People 2020 objectives as well as Los Angeles County and California rates is summarized in the following table.

### Summary of Health Access and Utilization Indicators

SPA 3 Compared to Los Angeles County, California and Healthy People 2020 Targets  
2017 and 2016

Indicator	SPA 3		County Rate	California Rate	Target Rate
	Rate	Status			
<b>Health Access (2017)</b>					
Insured All or Part of Year Age 0 to 64 Years	94%	-	94%	94%	100%
Usual Source of Ongoing Care All Ages	87%	-	85%	87%	95%
Delays in Getting Medical Care All Ages	9.1%	-	9.5%	10.3%	4.2%
Delays in Getting Medicines All Ages	5.2%	*	8.2%	8.5%	2.8%
<b>Health Utilization (2016)</b>					
Mammogram in Past Two Years Females 50 to 74 Years	88.2%	*	84.7%	83.2%	81.1%

Note:

Target rate is Healthy People 2020 objective

Source: UCLA Center for Health Policy Research

## Section 5: Mortality

This section includes:

---

- Summary of premature mortality in Los Angeles County and SPA 3
- Profile of deaths in Methodist Hospital Service Area
- Age-adjusted death rates in Los Angeles County benchmarked to Healthy People 2020 targets
- Comparison of Los Angeles County age-adjusted death rates to California

Key used to summarize Los Angeles County experiences benchmarked to Healthy People 2020 targets:

	Target Met
	Target Not Met
	No Target Established

## Premature Mortality in Los Angeles County

Years of potential life lost before age 75 years (YPLL-75) is one of the commonly used public health measures to reflect the impact of premature mortality. In 2013, the top three leading causes of premature death in Los Angeles County were coronary heart disease, homicide, and motor vehicle crashes. The ranking, and years of potential life lost before age 75 (YPLL-75) due to selected leading causes of death in Los Angeles County are summarized in the table on the next page.

### Years of Potential Life Lost for Leading Causes of Premature Death, Ranked

Los Angeles County  
2013

Rank	Cause of Death	Years of Potential Life Lost Before Age 75	
		Number	Percent
1	Coronary Heart Disease	53,380	12.2%
2	Homicide	23,993	5.5%
3	Motor Vehicle Crash	23,660	5.4%
4	Drug Overdose	22,412	5.1%
5	Suicide	21,641	5.0%
6	Liver Disease/Cirrhosis	21,064	4.8%
7	Lung Cancer	15,707	3.6%
8	Diabetes	14,625	3.4%
9	Stroke	14,146	3.2%
10	Breast Cancer	13,098	3.0%
—	All Other	212,321	48.7%
—	<b>Total</b>	<b>436,047</b>	<b>100.0%</b>

## Premature Mortality in Service Planning Area 3

In 2013, the top three leading causes of premature death in SPA 3 – San Gabriel Valley were coronary heart disease, liver disease, and lung cancer. The ranking and years of potential life lost before age 75 (YPLL) due to selected leading causes of death are summarized in the table below.

### Top Five Leading Causes of Premature Death, Ranked by YPLL

Service Planning Area 3 (San Gabriel Valley)

2013

Rank	Cause of Death	Years of Potential Life Lost Before Age 75	
		Number	Percent
1	Coronary Heart Disease	8,556	11.8%
2	Liver Disease/Cirrhosis	3,518	4.9%
3	Lung Cancer	3,449	4.8%
4	Suicide	3,407	4.7%
5	Homicide	3,330	4.6%
—	All Other	50,233	69.3%
—	<b>Total</b>	<b>72,493</b>	<b>100.0%</b>

## Profile of Deaths in Methodist Hospital Service Area

In 2016, there were 4,910 deaths in Methodist Hospital service area. Heart disease and cancer were the top two leading causes of death in the service area, accounting for 50 percent of all deaths. Of note, coronary heart disease is the leading cause of death in Methodist Hospital Service Area (2016) and the leading cause of premature death in Service Planning Area 3 (2013). Other leading causes of death in the service area are summarized in the table below.

### Profile of Deaths, Ranked By Select Leading Causes of Death

Methodist Hospital Service Area

2016

Select Leading Cause of Death	Number	Percent
Heart Disease	1,237	25.2%
Cancer (All Types)	1,214	24.7%
Stroke	291	5.9%
Alzheimer's disease	285	5.8%
Chronic Lower Respiratory Disease	268	5.5%
Influenza and Pneumonia	203	4.1%
Diabetes	197	4.0%
Unintentional Injuries (All Types)	178	3.6%
Chronic Liver Disease and Cirrhosis	106	2.2%
Essential Hypertension & Hypertensive Renal Disease	101	2.1%
Nephritis, Nephrotic Syndrome and Nephrosis	70	1.4%
Suicide	49	1.0%
All Other	711	14.5%
<b>All Causes of Death</b>	<b>4,910</b>	<b>100.0%</b>

Source: California Department of Public Health

# Coronary Heart Disease

**What's Being Measured** The age-adjusted death rate due to coronary heart disease.

**How the Measure is Defined** Coronary heart disease is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes I11 and I20-I25. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Healthy People 2020 Objective** Reduce coronary heart disease deaths to 103.4 deaths per 100,000 population.

**Methodist Hospital Service Area Experience (2016)** 1<sup>st</sup> cause of death

**Service Planning Area 3 – San Gabriel Valley Experience (2013)** 1<sup>st</sup> cause of premature death

## **Los Angeles County Experience**

**Measurement Period** 2015 – 2017

101.7 deaths per 100,000 population

**Source of Data** California Department of Public Health

# Stroke

**What's Being Measured** The age-adjusted death rate due to stroke.

**How the Measure is Defined** Stroke is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes I60-I69. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Healthy People 2020 Objective** Reduce stroke deaths to 34.8 deaths per 100,000 population.

**Methodist Hospital Service Area Experience (2016)** 3<sup>rd</sup> cause of death

## **Los Angeles County Experience**

**Measurement Period** 2015 – 2017

34.0 deaths per 100,000 population

**Source of Data** California Department of Public Health

## **Cancer (All Sites)**

**What's Being Measured** The age-adjusted death rate due to cancer (all sites).

**How the Measure is Defined** Cancer (all sites) is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes C00-C97. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Healthy People 2020 Objective** Reduce cancer deaths to 161.4 deaths per 100,000 population.

**Methodist Hospital Service Area Experience (2016)** 2<sup>nd</sup> cause of death

**Los Angeles County Experience**

**Measurement Period** 2015 – 2017

132.8 deaths per 100,000 population

**Source of Data** California Department of Public Health

# Lung Cancer

**What's Being Measured** The age-adjusted death rate due to lung cancer.

**How the Measure is Defined** Lung cancer is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes C33-C34. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Healthy People 2020 Objective** Reduce lung cancer deaths to 45.5 deaths per 100,000 population.

**Service Planning Area 3 – San Gabriel Valley Experience (2013)** 3<sup>rd</sup> cause of premature death

## **Los Angeles County Experience**

**Measurement Period** 2015 – 2017

24.8 deaths per 100,000 population

**Source of Data** California Department of Public Health

# Colorectal Cancer

**What's Being Measured** The age-adjusted death rate due to colorectal cancer.

**How the Measure is Defined** Colorectal cancer is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes C18-C21. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Healthy People 2020 Objective** Reduce colorectal cancer deaths to 14.5 deaths per 100,000 population.

## **Los Angeles County Experience**

**Measurement Period** 2015 – 2017

13.1 deaths per 100,000 population

**Source of Data** California Department of Public Health

# Prostate Cancer

**What's Being Measured** The age-adjusted death rate due to prostate cancer.

**How the Measure is Defined** Prostate cancer is defined as International Classification of Diseases, Tenth Revision (ICD-10) code C61. The rate is per 100,000 males and is standardized to the 2000 United States Standard Million population.

**Healthy People 2020 Objective** Reduce prostate cancer deaths to 21.8 deaths per 100,000 males.

## **Los Angeles County Experience**

**Measurement Period** 2015 – 2017

**Source of Data** California Department of Public Health

# Female Breast Cancer

**What's Being Measured** The age-adjusted death rate due to breast cancer in females.

**How the Measure is Defined** Breast cancer is defined as International Classification of Diseases, Tenth Revision (ICD-10) code C50. The rate is per 100,000 females and is standardized to the 2000 United States Standard Million population.

**Healthy People 2020 Objective** Reduce breast cancer deaths to 20.7 deaths per 100,000 females.

## **Los Angeles County Experience**

**Measurement Period** 2015 – 2017

18.5 deaths per 100,000 females

**Source of Data** California Department of Public Health

# Chronic Obstructive Pulmonary Diseases

**What's Being Measured** The age-adjusted death rate due to chronic obstructive pulmonary diseases. Chronic obstructive pulmonary diseases are a group of diseases that cause airflow blockage and breathing-related problems and include emphysema and chronic bronchitis.

**How the Measure is Defined** Chronic obstructive pulmonary diseases are defined as International Classification of Diseases, Tenth Revision (ICD-10) codes J40-J44, and excludes asthma. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Methodist Hospital Service Area Experience (2016)** 5<sup>th</sup> cause of death

**Healthy People 2020 Objective** Reduce chronic obstructive pulmonary disease deaths to 102.6 deaths per 100,000 population age 45 years and older.

## **Los Angeles County Experience**

**Measurement Period** 2015 – 2017

 28.2 deaths per 100,000 population

**Source of Data** California Department of Public Health

# Influenza/Pneumonia

**What's Being Measured** The age-adjusted death rate due to influenza/pneumonia.

**How the Measure is Defined** Influenza/Pneumonia is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes J09-J18. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Methodist Hospital Service Area Experience (2016)** 6<sup>th</sup> cause of death

**Healthy People 2020 Objective** None established.

## **Los Angeles County Experience**

**Measurement Period** 2015 – 2017

18.7 deaths per 100,000 population

**Source of Data** California Department of Public Health

## **Diabetes-Related**

**What's Being Measured** The age-adjusted death rate due to diabetes (as both an underlying cause of death and a contributing cause of death).

**How the Measure is Defined** Diabetes is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes E10-E14, as either an underlying or contributing cause of death. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Methodist Hospital Service Area Experience (2016)** 7<sup>th</sup> cause of death

**Healthy People 2020 Objective** Reduce the diabetes-related death rate to 65.8 per 100,000 population (includes those with diabetes listed as either an underlying or a contributing cause of death).

### **Los Angeles County Experience**

**Measurement Period** 2015 – 2017

22.9 deaths per 100,000 population

**Source of Data** California Department of Public Health

# Unintentional Injuries (All Types)

**What's Being Measured** The age-adjusted death rate due to all unintentional injuries.

**How the Measure is Defined** Unintentional injuries is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes V01-X59 and Y85-Y86. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Healthy People 2020 Objective** Reduce unintentional injury deaths to 36.4 deaths per 100,000 population.

**Methodist Hospital Service Area Experience (2016)** 8<sup>th</sup> cause of death

## **Los Angeles County Experience**

**Measurement Period** 2015 – 2017

23.7 deaths per 100,000 population

**Source of Data** California Department of Public Health

## Motor Vehicle Crashes (Traffic-Related)

**What's Being Measured** The age-adjusted death rate due to motor vehicle crashes (traffic related).

**How the Measure is Defined** Motor vehicle crashes is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes V02-V04 (.1, .9), V09.2, V12-V14 (.3-.9), V19 (.4-6), V20-V28 (.3-.9), V29-V79 (.4-.9), V80 (.3-.5), V81.1, V82.1, V83-V86 (.0-.3), V87 (.0-.8), and V89.2. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Healthy People 2020 Objective** Reduce deaths due to motor vehicle crashes to 12.4 deaths per 100,000 population.

### Los Angeles County Experience

**Measurement Period** 2015 – 2017

7.9 deaths per 100,000 population

**Source of Data** California Department of Public Health

# Homicide

**What's Being Measured** The age-adjusted death rate due to homicide.

**How the Measure is Defined** Homicide is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes U01-U02, X85-Y09 and Y87.1. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Healthy People 2020 Objective** Reduce homicide deaths to 5.5 deaths per 100,000 population.

**Service Planning Area 3 – San Gabriel Valley Experience (2013)** 5<sup>th</sup> cause of premature death

## **Los Angeles County Experience**

**Measurement Period** 2015 – 2017

6.1 deaths per 100,000 population

**Source of Data** California Department of Public Health

# Alzheimer's Disease

**What's Being Measured** The age-adjusted death rate due to Alzheimer's disease.

**How the Measure is Defined** Alzheimer's disease is defined as International Classification of Diseases, Tenth Revision (ICD-10) code G30. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Healthy People 2020 Objective** None established.

**Methodist Hospital Service Area Experience (2016)** 4<sup>th</sup> cause of death

## **Los Angeles County Experience**

**Measurement Period** 2015 – 2017

35.6 deaths per 100,000 population

**Source of Data** California Department of Public Health

# Suicide

**What's Being Measured** The age-adjusted death rate due to suicide.

**How the Measure is Defined** Suicide is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes U03, X60-X84 and Y87.0. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Healthy People 2020 Objective** Reduce suicide deaths to 10.2 deaths per 100,000 population.

**Methodist Hospital Service Area Experience (2016)** 12<sup>th</sup> cause of death

**Service Planning Area 3 – San Gabriel Valley Experience (2013)** 4<sup>th</sup> cause of premature death

**Los Angeles County Experience**

**Measurement Period** 2015 – 2017

8.0 deaths per 100,000 population

**Source of Data** California Department of Public Health

# Chronic Liver Disease and Cirrhosis

**What's Being Measured** The age-adjusted death rate due to cirrhosis.

**How the Measure is Defined** Cirrhosis is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes K70, K73, and K74. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Healthy People 2020 Objective** Reduce cirrhosis deaths to 8.2 deaths per 100,000 population.

**Methodist Hospital Service Area Experience (2016)** 9<sup>th</sup> cause of death

**Service Planning Area 3 – San Gabriel Valley Experience (2013)** 2<sup>nd</sup> cause of premature death

**Los Angeles County Experience**

**Measurement Period** 2015 – 2017

13.2 deaths per 100,000 population

**Source of Data** California Department of Public Health

## Summary of Mortality and Comparison to Healthy People 2020 Targets

Note: Findings are based on the top five causes of premature death in SPA 3 in 2013, a profile of deaths among residents of the service area in 2016, and three-year averages of deaths that occurred among residents of Los Angeles County during 2015 through 2017

In 2013, the top three leading causes of premature death in SPA 3 – San Gabriel Valley were coronary heart disease, liver disease, and suicide. The ranking and years of potential life lost before age 75 (YPLL) due to selected leading causes of death are summarized in the table below.

### Top Five Leading Causes of Premature Death, Ranked by YPLL

Service Planning Area 3 (San Gabriel Valley)

2013

Rank	Cause of Death	Years of Potential Life Lost Before Age 75	
		Number	Percent
1	Coronary Heart Disease	8,556	11.8%
2	Liver Disease/Cirrhosis	3,518	4.9%
3	Lung Cancer	3,449	4.8%
4	Suicide	3,407	4.7%
5	Homicide	3,330	4.6%
—	All Other	50,233	69.3%
—	<b>Total</b>	<b>72,493</b>	<b>100.0%</b>

Source: Los Angeles County Department of Public Health

In 2016, there were 4,910 deaths in the service area. Heart disease and cancer were the top two leading causes of death in the service area, accounting for 50 percent of all deaths. Of note, coronary heart disease is the leading cause of death in Methodist Hospital Service Area (2016) and the leading cause of premature death in Service Planning Area 3 (2013). Other leading causes of death in the service area are summarized in the following table.

### Profile of Deaths, Ranked By Select Leading Causes of Death

Methodist Hospital Service Area

2016

Select Leading Cause of Death	Number	Percent
Heart Disease	1,237	25.2%
Cancer (All Types)	1,214	24.7%
Stroke	291	5.9%
Alzheimer's disease	285	5.8%
Chronic Lower Respiratory Disease	268	5.5%
Influenza and Pneumonia	203	4.1%
Diabetes	197	4.0%
Unintentional Injuries (All Types)	178	3.6%
Chronic Liver Disease and Cirrhosis	106	2.2%
Essential Hypertension & Hypertensive Renal Disease	101	2.1%
Nephritis, Nephrotic Syndrome and Nephrosis	70	1.4%
Suicide	49	1.0%
All Other	711	14.5%
<b>All Causes of Death</b>	<b>4,910</b>	<b>100.0%</b>

Source: California Department of Public Health

When comparing age-adjusted death rates in Los Angeles County to Healthy People 2020 objectives, Los Angeles County experienced lower death rates in all leading causes of death than the stated target rates, with the exceptions of homicide and chronic liver disease and cirrhosis. The County experience compared to Healthy People 2020 national objectives and California experience is summarized in the table below.

### Summary of Age-Adjusted Death Rates by Cause of Death

Los Angeles County compared to California and Healthy People 2020 Targets

Three-Year Average (2015 to 2017)

Indicator	Los Angeles County		California Rate	Target Rate
	Rate	Status		
<b>Health Status</b>				
Coronary Heart Disease	101.7	+	87.4	103.4
Stroke	34.0	+	36.3	34.8
Cancer (All Sites)	132.8	+	137.4	161.4
Lung	24.8	+	27.5	45.5

Indicator	Los Angeles County		California Rate	Target Rate
	Rate	Status		
Colorectal	13.1	+	12.5	14.5
Prostate	19.2	+	19.4	21.8
Female Breast	18.5	+	18.9	20.7
Chronic Pulmonary Diseases	28.2	○	32.0	None
Influenza/Pneumonia	18.7	○	14.2	None
Diabetes	22.9	○	21.2	N/A
Unintentional Injuries (All Types)	23.7	+	32.2	36.4
Motor Vehicle Accidents	7.9	+	9.5	12.4
Homicide	6.1	-	5.2	5.5
Alzheimer's disease	35.6	○	35.7	None
Suicide	8.0	+	10.4	10.2
Chronic Liver Disease and Cirrhosis	13.2	-	12.2	8.2

Notes:

*Target rate is Healthy People 2020 objective*

*Rates are per 100,000 persons and are standardized to the 2000 U.S. Standard Million population*

*Healthy People 2020 Chronic pulmonary disease death rate is for the population age 45 years and older; data for the entire population is not comparable*

*Healthy People 2020 objective is based on both underlying and contributing cause of death which requires use of multiple cause of death files; California's data exclude multiple/contributing causes of death*

*Source: California Department of Public Health*

## Section 6: Maternal and Infant Health

This section includes:

---

- Demographic overview of females age 15 to 44 years in Methodist Hospital Service Area
- Summary of births in Methodist Hospital Service Area
- Maternal and infant health outcomes in Los Angeles County benchmarked to Healthy People 2020 targets
- Comparison of Los Angeles County maternal and infant outcomes to California

Key used to summarize Methodist Hospital Service Area experiences benchmarked to Healthy People 2020 Targets:

---

Detailed information – at the ZIP Code level – can be found in:

---

- Appendix D: Maternal Health

## Females Age 15 to 44 Years

**What's Being Measured** Females 15 to 44 years of age (child bearing age).

**How the Measure is Defined** The percentage of women age 15 to 44 years is calculated by dividing this age group of females by the total population (includes males).

### **Service Area Experience**

#### **Females Age 15 to 44 Years**

Methodist Hospital Service Area

2019

<b>Female Age Group</b>	<b>Number of Persons</b>	<b>Percent of Total Population</b>
15 to 17 Years	14,401	1.8%
18 to 20 Years	14,512	1.9%
21 to 24 Years	20,285	2.6%
25 to 34 Years	55,171	7.0%
35 to 44 Years	51,954	6.6%
<b>Total Women 15 to 44 Years</b>	<b>156,323</b>	<b>20.0%</b>
Total Population	783,391	—

*Note: Percentages rounded*

*Source: Claritas*

# Number of Births

**What's Being Measured** The number of live births.

**How the Measure is Defined** The three-year average is calculated by dividing the sum of the annual births by three.

## **Service Area Experience**

### **Number of Live Births**

Methodist Hospital Service Area  
*Three-Year Average (2015 to 2017)*

<b>Year</b>	<b>Number of Births</b>
2015	9,563
2016	9,506
2017	8,986
<b>Three-Year Average</b>	<b>9,352</b>

*Source: California Department of Public Health*

## **Births with Early Entry into Prenatal Care**

**What's Being Measured** The rate of live births to mothers with early prenatal care during pregnancy.

**How the Measure is Defined** Early prenatal care is defined as the percentage of mothers who begin prenatal care in the first trimester. The rate is expressed per 100 live births and excludes births with unknown prenatal care.

**Why the Measurement is Helpful** Prenatal care includes three major components: risk assessment, treatment for medical conditions or risk reduction, and education. Each component can contribute to reductions in perinatal illness, disability, and death by identifying and mitigating potential risk and helping women to address behavioral factors – such as smoking and alcohol and drug use – that contribute to poor outcomes. Prenatal care is more likely to be effective if women begin receiving care early in pregnancy.

**Healthy People 2020 Objective** Increase the proportion of pregnant women who receive prenatal care beginning in the first trimester to 77.9% of live births.

### **Los Angeles County Experience**

**Measurement Period** 2015 to 2017 (Three-Year Average)

84.8% of births were to mothers with prenatal care beginning in the first trimester

**Source of Data** California Department of Public Health

# Infant Birth Weight

**What's Being Measured** The rate of low birth weight infants.

**How the Measure is Defined** Low birth weight is defined as live births weighing less than 2,500 grams (5.5 pounds). Normal birth weight is defined as 2,500 grams or more. The rates are expressed per 100 live births and exclude births with unknown birth weight.

**Why the Measurement is Helpful** Low birth weight is associated with long-term disabilities, such as cerebral palsy, autism, mental retardation, vision and hearing impairments and other developmental disabilities and is the risk factor most closely associated with neonatal death. Smoking accounts for 20 to 30 percent of all low birth weight infants in the United States. The effect of smoking on low birth weight rates appears to be attributable to intrauterine growth retardation rather than to preterm delivery. Despite the low proportion of pregnancies resulting in low birth weight infants, expenditures for the care of low birth weight infants total more than half of the costs incurred for all newborns.

**Healthy People 2020 Objectives** Reduce low birth weight infants to 7.8%.

## **Los Angeles County Experience**

**Measurement Period** 2015 to 2017 (Three-Year Average)

7.2% of infants were low birth weight

**Source of Data** California Department of Public Health

# Infant Mortality

**What's Being Measured** The rate of infant deaths.

**How the Measure is Defined** Infant mortality is the number of deaths among infants under one year of age. The rate is expressed per 1,000 live births.

**Why the Measurement is Helpful** The infant mortality rate is made up to two components: neonatal mortality (death in the first 28 days of life) and postneonatal mortality (death from the infants' 29<sup>th</sup> days but within the first year). The leading causes of neonatal death include birth defects, disorders related to short gestation and low birth weight, and pregnancy complications. Postneonatal death reflects events experienced in infancy, including SIDS, birth defects, injuries and homicide.

**Healthy People 2020 Objective** Reduce the rate of all infant deaths to no more than 6.0 per 1,000 live births.

## **Service Area Experience**

**Measurement Period** 2014 – 2016

4.3 infant deaths per 1,000 live births

**Source of Data** California Department of Public Health

## Summary of Maternal and Infant Health Indicators and Comparison to Healthy People 2020 Targets

Note: Findings are based on live births that occurred in the service area during 2015 to 2017, three-year averages of pregnancy and birth outcomes that occurred among residents of Los Angeles County during 2015 to 2017, and three-year averages of infant mortality during 2014 to 2016

During the three-year period from 2015 through 2017, there were 9,352 births a year in the service area.

### Number of Live Births

Methodist Hospital Service Area  
Three-Year Average (2015 to 2017)

Year	Number of Births
2015	9,563
2016	9,506
2017	8,986
<b>Three-Year Average</b>	<b>9,352</b>

Source: California Department of Public Health

When comparing maternal and infant health indicators in Los Angeles County to Healthy People 2020 objectives, Los Angeles County met all of the objectives. The county experience compared to Healthy People 2020 national objectives is summarized in the table below.

### Summary of Maternal and Infant Health Indicators

Los Angeles County, California and Healthy People 2020 Targets  
Three-Year Averages (2015 to 2017) and (2014 to 2016)

Indicator	Los Angeles County		California Rate	Target Rate
	Rate	Status		
<b>Pregnancy/Birth Outcomes (2015 to 2017)</b>				
Early Prenatal Care	84.8%	+	83.5%	77.9%
Low Birth Weight Infants	7.2%	+	6.9%	7.8%
<b>Infant Outcomes (2014 to 2016)</b>				
Infant Mortality	4.3	+	4.4	6.0

Note: Target rate is Healthy People 2020 objective

## Section 7: Child and Adolescent Health

This section includes:

---

- Demographic overview of children and youth age 0 to 20 years in Methodist Hospital Service Area
- Summary of students enrolled in free or reduced fee meals
- Summary of high school dropouts
- Findings from the 2017 California Health Interview Survey for SPA 3 benchmarked to Healthy People 2020 targets
- Summary of child abuse and neglect (Los Angeles County) from Center for Social Sciences Research at University of California at Berkeley
- Comparison of SPA 3 child and adolescent health indicators to Los Angeles County and California

Key used to summarize SPA 3 experiences benchmarked to Healthy People 2020 Targets:

	Target Met
	Target Not Met
	Result is Statistically Unstable

Detailed information – at the ZIP Code level – can be found in:

---

- Appendix C: Age Group Detail

## Children and Youth Age 0 to 20 Years

**What's Being Measured** Children and youth under age 21 years.

**How the Measure is Defined** The percentage of the population 0 to 20 years is calculated by dividing this age group by the total population.

### **Service Area Experience**

#### **Children and Youth Age 0 to 20 Years**

Methodist Hospital Service Area

2019

<b>Age Group</b>	<b>Number of Persons</b>	<b>Percent of Total Population</b>
0 to 4 Years	45,359	5.8%

10 to 14 Years	46,365	5.9%
15 to 17 Years	29,470	3.8%
18 to 20 Years	29,550	3.8%
<b>Total 0 to 20 Years</b>	<b>197,010</b>	<b>25.1%</b>
Total Population	783,391	—

*Note: Percentages rounded*

*Source: Claritas*

## Students Enrolled in Free or Reduced Price Meals

**What's Being Measured** Students enrolled in the Free or Reduced Price Meal Programs.

**How the Measure is Defined** The Free or Reduced Price Meal Program is a federal program administered by the U.S. Department of Agriculture. Program participation is by application and is based on income of the child's parent or guardian. Students enrolled in the program is defined as a student's family has met eligibility criteria and student is "signed up" to participate. Data is for the 2017/2018 school year and is from the California Department of Education website.

**Why the Measurement is Helpful** Students enrolled in the program provides information regarding the socioeconomic status of families with children attending public schools.

**Healthy People 2020 Objective** None established.

### Service Area Experience

#### Students Enrolled in Free or Reduced Price Meals

School Districts in Methodist Hospital Service Area  
2017/2018 School Year

School District	Free/Reduced Price Meals	
	Number	Percent
Alhambra Unified	11,324	67.2%

Los Angeles County	1,034,525	69.3%
California	3,739,347	60.1%

Source: California Department of Education

## High School Dropouts

**What's Being Measured** Dropouts in grade 9 through grade 12 in public schools.

**How the Measure is Defined** The following criteria are used to define a dropout: (1) was enrolled in grades 7, 8, 9, 10, 11 or 12 at some time during the previous school year and left school prior to completing the school year and has not returned to school as of Information Day or (2) did not begin attending the next grade (7, 8, 9, 10, 11, or 12) in the school to which they were assigned or in which they had pre-registered or were expected to attend by Information Day. A 1-year dropout rate (calculated by dividing the grade 9 to 12 dropouts by the grade 9 to 12 enrollment) is used by the National Center for Education Statistics to compare state and school districts. Data is for the 2017/2018 school year and is from the California Department of Education website.

**Why the Measurement is Helpful** High school dropouts are three times as likely to slip into poverty as those who finish high school; they make up nearly half of the heads of households receiving public assistance. Economic prospects for dropouts will be even gloomier as more jobs require advanced skill and technical knowledge. High school dropouts are at risk for other negative outcomes like becoming a teen parent or spending time in prison. The children of dropouts are much less likely to graduate themselves, perpetuating a cycle of diminished opportunities.

**Healthy People 2020 Objective** None established.

### Service Area Experience

#### High School Dropouts

School Districts in Methodist Hospital Service Area

2017/2018 School Year

School District	High School Dropouts	
	Number	Rate

# Medical Insurance

**What's Being Measured** Persons age 0 to 17 years with medical insurance the entire past year or only part of the past year.

**How the Measure is Defined** The percentage of persons with health care coverage includes persons with employment-based insurance, Medi-Cal or Healthy Families programs, privately purchased health insurance or other insurance. Insured persons include those with health insurance for all or part of the year. Results are from the 2017 California Health Interview Survey.

**Why the Measurement is Helpful** Health insurance coverage is a key component of access to health care. Studies show that people with health insurance coverage report fewer access problems than those who are uninsured.

**Healthy People 2020 Objective** Increase the proportion of persons age 0 to 17 years with medical insurance to 100%.

## Service Area Experience

**Measurement Period** 2017

96% of children age 0 to 17 years have medical insurance

**Source of Data** UCLA Center for Health Policy Research

# Source of Ongoing Care

**What's Being Measured** Persons age 0 to 17 years with a specific source of ongoing care

**How the Measure is Defined** Specific sources of ongoing care may include any of the following: doctor's office/HMO/Kaiser, community, government or hospital clinic, emergency room/urgent care, health center facility, or some other place. Results are from the 2017 California Health Interview Survey.

**Why the Measurement is Helpful** Access to care depends in part on access to an ongoing source of care. People with a usual source of health care are more likely than those without a usual source of care to receive a variety of preventive health care services. An estimated 15 percent of adults in the US lack a usual source of care; an estimated 7 percent of children age 17 years and under lack a specific source of ongoing care. Uninsured persons under age 65 years are more likely to lack a usual source of care than those who have either public or private health insurance.

**Healthy People 2020 Objective** Increase the proportion of persons age 0 to 17 years who have a specific source of ongoing care to 100%

Note: The Healthy People 2020 objective excludes emergency rooms as a usual source of care.

## Service Area Experience

**Measurement Period** 2017

91% of children age 0 to 17 years have a specific source of ongoing care

**Source of Data** UCLA Center for Health Policy Research

## Obese Adolescents

**What's Being Measured** The proportion of teens age 12 to 17 years who are obese.

**How the Measure is Defined** Overweight or obese adolescents are defined as those who have a Body Mass Index (or BMI) at or above the gender- and age-specific 95<sup>th</sup> percentile of BMI based on the revised CDC Growth Charts for the United States. Results are based on self-reported data by adolescents and are from the 2017 California Health Interview Survey.

**Why the Measurement is Helpful** In 1999-2000, 15% of children and adolescents were overweight – triple what the proportion was in 1980. Obese children and adolescents are more likely to become obese adults; overweight adults are at increased risk for heart disease, high blood pressure, stroke, diabetes, some types of cancer, and gallbladder disease.

**Healthy People 2020 Objective** Reduce the proportion of adolescents age 12 to 17 years who are obese to 16.1%.

### **Service Area Experience**

**Measurement Period** 2017

25.5% of adolescents age 12 to 17 years are obese

**Source of Data** UCLA Center for Health Policy Research

# Tobacco Use

**What's Being Measured** The proportion of adolescents age 14 to 17 years who reported having smoked on one or more of the past 30 days.

**How the Measure is Defined** Teens were asked if they smoked cigarettes in the past 30 days. Results are from the 2017 California Health Interview Survey.

**Why the Measurement is Helpful** Tobacco use is the leading preventable cause of death in the United States. Tobacco use is a major risk factor for heart disease, stroke, emphysema and cancers of the lung, pharynx, oral cavity, esophagus, pancreas and bladder. These and other illnesses associated with tobacco use result in health care expenditures of more than \$53 billion annually in the United States. Currently, estimates of annual smoking-associated economic costs in the United States are more than \$167 billion.

**Healthy People 2020 Objective** Reduce cigarette smoking among adolescents (in grades 9 through 12) to 16% or less.

## Service Area Experience

**Measurement Period** 2017

0% of adolescents age 14 to 17 years smoke cigarettes

**Source of Data** UCLA Center for Health Policy Research

# Binge Drinking

**What's Being Measured** The proportion of adolescents age 12 to 17 years who reported binge drinking in the past 30 days.

**How the Measure is Defined** Teens were asked the number of alcoholic beverages they consumed at the same time or within a couple of hours during the past month. Binge drinking is defined as drinking 5 or more alcoholic beverages for males or 4 or more alcoholic beverages for females at the same time or within a couple of hours of each other during the past 30 days. Results are from the 2017 California Health Interview Survey.

**Why the Measurement is Helpful** Binge drinking is associated with a profound social harm, economic costs as well as increased disease burden. Binge drinking is more common in males, during adolescence and young adulthood. Most binge drinkers are not familiar with the risks associated with binge drinking. Heavy regular binge drinking is associated with adverse effects on neurologic, cardiac, gastrointestinal, hematologic, immune, musculoskeletal organ systems as well as increasing the risk of alcohol induced psychiatric disorders. A US-based review of the literature found that up to one third of adolescents binge drink, with six percent reaching the threshold of having an alcohol-related substance use disorder. Binge drinking during adolescence is associated with traffic accidents and other types of accidents, violent behavior as well as suicide. The more often a child or adolescent binge drinks and the younger they are the more likely that they will develop an alcohol use disorder including alcoholism. A large number of adolescents who binge drink also consume other psychotropic substances.

**Healthy People 2020 Objective** Reduce the proportion of adolescents age 12 to 17 years who reported they engaged in binge drinking during the past month to 8.6%

## Service Area Experience

**Measurement Period** 2017

2.9% of adolescents age 12 to 17 years reported binge drinking

**Source of Data** UCLA Center for Health Policy Research

## Child Abuse and Neglect

**What's Being Measured** Substantiated cases of child abuse and neglect (child maltreatment) among children age 0 to 17 years.

**How the Measure is Defined** The rate of substantiated child abuse and neglect incidents is determined by the number of child abuse and neglect reports that warrant an in-person investigation and are then substantiated. The rate is expressed per 1,000 children in the population age 0 to 17 years. The source of the data is the Center for Social Sciences Research at University of California at Berkeley. The data covers January 1 to December 31, 2018.

**Why the Measurement is Helpful** Child abuse and neglect are found in families across the social spectrum, and cases are becoming more complex, with more entrenched risk factors. Social isolation, family disorganization, and financial stress and poverty, can also trigger child abuse. Abused children often experience higher rates of suicide, depression, substance abuse, difficulties in school, and other behavioral problems in later life. Abuse children are also at greater risk of becoming delinquents, mistreating their own children, and becoming involved in violent partner relationships as teens and adults.

**Healthy People 2020 Objective** Reduce the incidence of child maltreatment to no more than 8.5 per 1,000 children aged 18 and younger.

### **Los Angeles County Experience**

**Measurement Period** 2018

10.0 cases of child abuse per 1,000 children

**Source of Data** Center for Social Sciences Research at University of California at Berkeley

# Summary of Child and Adolescent Health and Comparison to Healthy People 2020 Targets

Note: Findings are based on 2017 California Health Interview Survey for SPA 3

When comparing child and adolescent health indicators in SPA 3 to Healthy People 2020 objectives, results in SPA 3 were statistically unreliable for all health access and health behaviors. The SPA 3 experience compared to Healthy People 2020 national objectives is summarized in the table below.

## Summary of Child and Adolescent Health Indicators

SPA 3 Compared to Los Angeles County, California and Healthy People 2020 Targets

2017

Indicator	SPA 3		County Rate	California Rate	Target Rate
	Rate	Status			
<b>Health Access</b>					
Insured All or Part of Year Age 0 to 17 Years	96%	*	99%	99%	100%
Usual Source of Ongoing Care Age 0 to 17 Years	91%	*	89%	90%	100%
<b>Health Behaviors</b>					
Obese Age 12 to 17 Years	25.5%	*	*14.0%	*14.6%	16.1%
Currently Smoke Cigarettes Age 14 to 17 Years	0%	*	*1.6%	*0.8%	16.0%
Binge Drinking in Past Month Age 12 to 17 Years	2.9%	*	*7.3%	*5.8%	8.6%

Notes:

Target rate is Healthy People 2020 objective

- Appendix C: Age Group Detail

## Adults Age 21 to 64 Years

**What's Being Measured** Adults 21 to 64 years of age.

**How the Measure is Defined** The percentage of the population 21 to 64 years is calculated by dividing this age group by the total population.

### Service Area Experience

#### Adults Age 21 to 64 Years

Methodist Hospital Service Area

2019

Age Group	Number of Persons	Percent of Total Population
21 to 24 Years	41,098	5.2%
25 to 34 Years	112,297	14.3%
35 to 44 Years	102,919	13.1%
45 to 54 Years	106,665	13.6%
55 to 64 Years	101,619	13.0%
<b>Total 21 to 64 Years</b>	<b>464,598</b>	<b>59.3%</b>
Total Population	783,391	—

*Note: Percentages rounded*

*Source: Claritas*

# Medical Insurance

**What's Being Measured** Adults age 18 to 64 years with health insurance the entire past year or only part of the past year.

**How the Measure is Defined** The percentage of adults with medical insurance includes persons with employment-based insurance, Medi-Cal or Healthy Families programs, privately purchased health insurance or other insurance. Uninsured persons include those without health insurance for all or part of the year. Results are from the 2017 California Health Interview Survey.

**Why the Measurement is Helpful** Health insurance coverage is a key component of access to health care. Studies show that people with health insurance coverage report fewer access problems than those who are uninsured.

**Healthy People 2020 Objective** Increase the proportion of persons age 18 to 64 years with medical insurance to 100%.

## **Service Area Experience**

**Measurement Period** 2017

91% of adults age 18 to 64 years have medical insurance

**Source of Data** UCLA Center for Health Policy Research

## Source of Ongoing Care

**What's Being Measured** Adults age 18 to 64 years with a specific source of ongoing care

**How the Measure is Defined** Specific sources of ongoing care may include any of the following: doctor's office/HMO/Kaiser, community, government or hospital clinic, emergency room/urgent care, health center facility, or some other place. Results are from the 2017 California Health Interview Survey.

**Why the Measurement is Helpful** Access to care depends in part on access to an ongoing source of care. People with a usual source of health care are more likely than those without a usual source of care to receive a variety of preventive health care services. An estimated 15 percent of adults in the US lack a usual source of care; an estimated 7 percent of children age 17 years and under lack a specific source of ongoing care. Uninsured persons under age 65 years are more likely to lack a usual source of care than those who have either public or private health insurance.

**Healthy People 2020 Objective** Increase the proportion of persons age 18 to 64 years who have a specific source of ongoing care to 89.4%

Note: The Healthy People 2020 objective excludes emergency rooms as a usual source of care.

### **Service Area Experience**

**Measurement Period** 2017

83.3% of adults age 18 to 64 years have a specific source of ongoing care

**Source of Data** UCLA Center for Health Policy Research

# Healthy Weight and Obesity

**What's Being Measured** The proportion of adults age 20 to 64 years who are at a normal, healthy weight and those that are obese.

**How the Measure is Defined** Adults were asked their height and weight. These measures were used to calculate a BMI (or Body Mass Index). BMI is calculated by dividing weight (in kilograms) by height squared (in meters). A BMI from 0 to 18.49 is described as underweight, a BMI from 18.5 to 24.99 is described as normal, healthy weight; a BMI from 25.0 to 29.99 is described as overweight, and a BMI of 30.0 or higher is described as obese. Results are from the 2017 California Health Interview Survey.

**Why the Measurement is Helpful** Overweight and obesity are associated with four of the ten leading causes of death – coronary heart disease, some types of cancer, stroke and type 2 diabetes – as well as a range of other negative health outcomes, such as gallbladder disease, respiratory dysfunction, gout and osteoarthritis. The prevalence of overweight among Americans increased from 1988-1994 to 1999-2002 due to imbalances in caloric intake and energy expenditure. By 1999-2002, nearly one in three adults was obese. The estimated cost of obesity to the United States was \$117 billion in 2000.

## Healthy People 2020 Objectives

Increase the proportion of adults age 20 years and older who are at a healthy weight to 33.9% (BMI of 18.5 to 24.99).

Reduce the proportion of adults age 20 years and older who are obese to 30.5% (BMI of 30 or more).

## Service Area Experience

### Measurement Period 2017

42.9% of adults age 20 to 64 years are at a healthy weight

22.3% of adults age 20 to 64 years are obese

**Source of Data** UCLA Center for Health Policy Research

# High Blood Pressure

**What's Being Measured** The proportion of adults age 18 to 64 years who were ever diagnosed with high blood pressure.

**How the Measure is Defined** Adults were asked "Has a doctor ever told you that you have high blood pressure?" Results are from the 2017 California Health Interview Survey.

**Why the Measurement is Helpful** Heart disease is the leading cause of death for all people in the United States and stroke is the third leading cause of death. Heart disease and stroke continue to be major causes of disability and significant contributors to increases in health care costs in the U.S. High blood pressure is known as the "silent killer" and remains a major risk factor for coronary heart disease, stroke and heart failure. About 50 million adults in the United States have high blood pressure with many still unaware that they have this condition. High blood pressure is more common in older persons.

**Healthy People 2020 Objective** Reduce the proportion of adults age 18 years and older with high blood pressure to 26.9%.

## **Service Area Experience**

**Measurement Period** 2017

21.7% of adults age 18 to 64 years diagnosed with high blood pressure

**Source of Data** UCLA Center for Health Policy Research

# Tobacco Use

**What's Being Measured** The proportion of adults age 18 to 64 years who currently smoke cigarettes.

**How the Measure is Defined** Adults were asked if they smoked cigarettes in the past 30 days. Results are from the 2017 California Health Interview Survey.

**Why the Measurement is Helpful** Tobacco use is the leading preventable cause of death in the United States. Tobacco use is a major risk factor for heart disease, stroke, emphysema and cancers of the lung, pharynx, oral cavity, esophagus, pancreas and bladder. These and other illnesses associated with tobacco use result in health care expenditures of more than \$53 billion annually in the United States. Currently, estimates of annual smoking-associated economic costs in the United States are more than \$167 billion.

**Healthy People 2020 Objective** Reduce cigarette smoking among adults age 18 years and older to 12% or less.

## **Service Area Experience**

**Measurement Period** 2017

9.3% of adults age 18 to 64 years smoke cigarettes

**Source of Data** UCLA Center for Health Policy Research

# Summary of Adult Health and Comparison to Healthy People 2020 Targets

Note: Findings are based on 2017 California Health Interview Survey for SPA 3

When comparing adult health indicators in SPA 3 to Healthy People 2020 objectives, though SPA 3 did not meet the health access objectives related to medical insurance (insured all or part of the year) and usual source of ongoing care, SPA 3 did meet the objectives for all stated targets regarding health behaviors. The SPA experience compared to Healthy People 2020 national objectives is summarized in the following table.

## Summary of Adult Health Indicators

SPA 3 Compared to Los Angeles County, California and Healthy People 2020 Targets  
2017

Indicator	SPA 3		County Rate	California Rate	Target Rate
	Rate	Status			
<b>Health Access</b>					
Insured All or Part of Year Age 18 to 64 Years	91%	-	92%	92%	100%
Usual Source of Ongoing Care Age 18 to 64 Years	83.3%	-	81.6%	83.7%	89.4%
<b>Health Behaviors</b>					
Healthy Weight Age 20 to 64 Years	42.9%	+	36.1%	36.6%	33.9%
Obese Age 20 to 64 Years	22.3%	+	30.3%	27.8%	30.5%
Diagnosed with High Blood Pressure Age 18 to 64 Years	21.7%	+	23.0%	22.2%	26.9%
Currently Smoke Cigarettes Age 18 to 64 Years	9.3%	+	9.5%	10.9%	12.0%

Note:

Target rate is Healthy People 2020 objective

Source: UCLA Center for Health Policy Research

## Section 9: Senior Health

This section includes:

---

- Demographic overview of seniors age 65 years and older in Methodist Hospital Service Area
- Findings from the 2017 California Health Interview Survey for SPA 3 benchmarked to Healthy People 2020 targets
- Comparison of SPA 3 senior health indicators to Los Angeles County and California

Key used to summarize SPA 3 experiences benchmarked to Healthy People 2020 Targets:

---

	Target Met
	Target Not Met
	Result is Statistically Unstable

Detailed information – at the ZIP Code level – can be found in:

---

- Appendix C: Age Group Detail

Listing of Senior Centers located in Methodist Hospital Service Area can be found in:

---

- Section 12: Health Facilities and Other Resources

## Seniors Age 65 Years and Older

**What's Being Measured** Seniors 65 years of age and older.

**How the Measure is Defined** The percentage of the population 65 years and older is calculated by dividing this age group by the total population.

### **Service Area Experience**

#### **Seniors Age 65 Years and Older**

Methodist Hospital Service Area

2019

<b>Age Group</b>	<b>Number of Persons</b>	<b>Percent of Total Population</b>
65 to 74 Years	70,444	9.0%
75 to 84 Years	34,779	4.4%
85 Years and Older	16,560	2.1%
<b>Total 65 Years and Older</b>	<b>121,783</b>	<b>15.5%</b>
Total Population	783,391	—

*Note: Percentages rounded*

## Senior Households by Income Group

**What's Being Measured** Senior households in various income groupings.

**How the Measure is Defined** Household income includes the total money received in the stated calendar year by all household members 65 years and older. The number of households with an annual household income is reported for the following ten income groups: (1) under \$15,000 (2) \$15,000 to \$24,999 (3) \$25,000 to \$34,999 (4) \$35,000 to \$49,999 (5) \$50,000 to \$74,999 (6) \$75,000 to \$99,999 (7) \$100,000 to \$124,999 (8) \$125,000 to \$149,999 (9) \$150,000 to \$199,999 and (10) \$200,000 and over. The sum of households with these ten income groupings is the 2019 senior households.

### Service Area Experience

#### Senior Households by Income Group

Methodist Hospital Service Area

2019

Seniors Households by Income Group	Number of Senior Households	Percent of Senior Households
Under \$15,000	8,814	14.2%
\$15,000 to \$24,999	8,768	14.1%
\$25,000 to \$34,999	6,249	10.1%
\$35,000 to \$49,999	7,346	11.8%
\$50,000 to \$74,999	9,202	14.8%
\$75,000 to \$99,999	6,158	9.9%
\$100,000 to \$124,999	4,487	7.2%
\$125,000 to \$149,999	3,135	5.0%
\$150,000 to \$199,999	3,114	5.0%
\$200,000 and over	4,850	7.8%

Source: Claritas

## Source of Ongoing Care

**What's Being Measured** Persons age 65 years and older with a specific source of ongoing care

**How the Measure is Defined** Specific sources of ongoing care may include any of the following: doctor's office/HMO/Kaiser, community, government or hospital clinic, emergency room/urgent care, health center facility, or some other place. Results are from the 2017 California Health Interview Survey.

**Why the Measurement is Helpful** Access to care depends in part on access to an ongoing source of care. People with a usual source of health care are more likely than those without a usual source of care to receive a variety of preventive health care services. An estimated 15 percent of adults in the US lack a usual source of care.

**Healthy People 2020 Objective** Increase the proportion of persons age 65 years and older who have a specific source of ongoing care to 100%

Note: The Healthy People 2020 objective excludes emergency rooms as a usual source of care.

### **Service Area Experience**

**Measurement Period** 2017

95% of seniors age 65 years and older have a specific source of ongoing care

**Source of Data** UCLA Center for Health Policy Research

## Flu Shot in Past Year

**What's Being Measured** Seniors age 65 years and older who received a flu shot in the past year.

**How the Measure is Defined** Seniors age 65 years and older were asked "During the past 12 months, have you had a flu shot?" Results are from the 2016 California Health Interview Survey.

**Why the Measure is Helpful** Infectious diseases remain a cause of illness, disability and death and impose a tremendous burden on society, both physically and financially. Vaccines are an important defense against influenza and pneumonia.

**Healthy People 2020 Objective** Increase the proportion of noninstitutionalized adults age 65 years and older who are vaccinated annually against influenza to 90%.

### **Service Area Experience**

**Measurement Period** 2016

67% of seniors age 65 years and older received a flu shot in the past year

**Source of Data** UCLA Center for Health Policy Research

# Healthy Weight and Obesity

**What's Being Measured** The proportion of seniors age 65 years and older who are at a normal, healthy weight and those that are obese.

**How the Measure is Defined** Adults were asked their height and weight. These measures were used to calculate a BMI (or Body Mass Index). BMI is calculated by dividing weight (in kilograms) by height squared (in meters). A BMI from 0 to 18.49 is described as underweight, a BMI from 18.5 to 24.99 is described as normal, healthy weight; a BMI from 25.0 to 29.99 is described as overweight, and a BMI of 30.0 or higher is described as obese. Results are from the 2017 California Health Interview Survey.

**Why the Measurement is Helpful** Overweight and obesity are associated with four of the ten leading causes of death – coronary heart disease, some types of cancer, stroke and type 2 diabetes – as well as a range of other negative health outcomes, such as gallbladder disease, respiratory dysfunction, gout and osteoarthritis. The prevalence of overweight among Americans increased from 1988-1994 to 1999-2002 due to imbalances in caloric intake and energy expenditure. By 1999-2002, nearly one in three adults was obese. The estimated cost of obesity to the United States was \$117 billion in 2000.

## Healthy People 2020 Objectives

Increase the proportion of adults age 20 years and older who are at a healthy weight to 33.9% (BMI of 18.5 to 24.99).

Reduce the proportion of adults age 20 years and older who are obese to 30.5% (BMI of 30 or more).

## Service Area Experience

### Measurement Period 2017

35.8% of seniors age 65 years and older are at a healthy weight

22.1% of seniors age 65 years and older are obese

**Source of Data** UCLA Center for Health Policy Research

# High Blood Pressure

**What's Being Measured** The proportion of seniors 65 years and older who were ever diagnosed with high blood pressure or high blood cholesterol.

**How the Measure is Defined** Adults were asked "Has a doctor ever told you that you have high blood pressure?" Results are from the 2017 California Health Interview Survey.

**Why the Measurement is Helpful** Heart disease is the leading cause of death for all people in the United States and stroke is the third leading cause of death. Heart disease and stroke continue to be major causes of disability and significant contributors to increases in health care costs in the U.S. High blood pressure is known as the "silent killer" and remains a major risk factor for coronary heart disease, stroke and heart failure. About 50 million adults in the United States have high blood pressure with many still unaware that they have this condition. High blood pressure is more common in older persons.

**Healthy People 2020 Objective** Reduce the proportion of adults age 18 years and older with high blood pressure to 26.9%

## **Service Area Experience**

**Measurement Period** 2017

67.9% of seniors age 65 years and older have high blood pressure

**Source of Data** UCLA Center for Health Policy Research

# Tobacco Use

**What's Being Measured** The proportion of adults age 65 years and older who currently smoke cigarettes.

**How the Measure is Defined** Adults were asked if they smoked cigarettes in the past 30 days. Results are from the 2017 California Health Interview Survey.

**Why the Measurement is Helpful** Tobacco use is the leading preventable cause of death in the United States. Tobacco use is a major risk factor for heart disease, stroke, emphysema and cancers of the lung, pharynx, oral cavity, esophagus, pancreas and bladder. These and other illnesses associated with tobacco use result in health care expenditures of more than \$53 billion annually in the United States. Currently, estimates of annual smoking-associated economic costs in the United States are more than \$167 billion.

**Healthy People 2020 Objective** Reduce cigarette smoking among adults age 18 years and older to 12% or less.

## **Service Area Experience**

**Measurement Period** 2017

8.2% of seniors age 65 years and older smoke cigarettes

**Source of Data** UCLA Center for Health Policy Research

# Summary of Senior Health Indicators and Comparison to Healthy People 2020 Targets

Note: Findings are based on 2017 and 2016 California Health Interview Survey for SPA 3

When comparing senior health indicators in the SPA to Healthy People 2020 objectives, the SPA did not meet the objectives related to health access for: flu shot received in past year; and related to health behaviors for: healthy weight and diagnosed with high blood pressure. The SPA experience compared to Healthy People 2020 national objectives is summarized in the table below.

## Summary of Senior Health Indicators

SPA 3 Compared to Los Angeles County, California and Healthy People 2020 Targets  
2017 and 2016

Indicator	SPA 3		County Rate	California Rate	Target Rate
	Rate	Status			
<b>Health Access (2017 and 2016)</b>					
Usual Source of Ongoing Care Age 65 Years and Older	95%	*	*94%	*96%	100%
Flu Shot Past Year (2016) Age 65 Years and Older	67%	-	67%	69%	90%
<b>Health Behaviors</b>					
Healthy Weight Age 65 Years and Older	35.8%	-	35.8%	36.7%	33.9%
Obese Age 65 Years and Older	22.1%	*	22.9%	23.3%	30.5%
Diagnosed with High Blood Pressure Age 65 Years and Older	67.9%	-	62.9%	58.9%	26.9%
Currently Smoke Cigarettes Age 65 Years and Older	8.2%	*	6.4%	6.4%	12.0%

Note:

Target rate is Healthy People 2020 objective

# Section 10: Community Consultation

This section includes:

---

- Overview of the community consultation process
- Analysis of the community consultation

Additional information regarding participants in the community consultation can be found in:

---

- Appendix D: Community Consultation Participants

Additional information regarding Methodist Hospital Service Area can be found in:

---

- Section 3: Service Area Definition and Demographics
- Section 4: Health Access and Utilization
- Section 5: Mortality
- Section 6: Maternal and Infant Health
- Section 7: Child and Adolescent Health
- Section 8: Adult Health
- Section 9: Senior Health
- Section 12: Existing Health Facilities and Resources

## Overview

The project consultant completed twenty telephone interviews (80 percent response rate) during a five-week period beginning in mid-September 2019.

Prior to conducting the interviews, Methodist Hospital leadership and staff identified 25 contacts for interviews. Individuals selected for interviews represented Los Angeles County Department of Public Health, representatives of cities/departments in the hospital services area, non-profit health community-based health organizations serving populations such as the poor and Chinese-speaking residents, centers and organizations serving seniors, area specialists of organizations with expertise in heart disease and cancer, physicians with clinical practices in the community, and a business owner. Once individuals confirmed interest in participation, a letter – describing the purpose of the phone survey and the questions to be posed in the upcoming telephone interview – was distributed electronically (via email or facsimile) to all contacts.

Those participating in the community consultation were asked to respond to the following questions:

1. In your opinion, what are the top three health issues in the San Gabriel Valley?  
(Note: Contacts with expertise in cancer were asked to identify the top three health issues related to cancer services.)
2. Are there specific neighborhood areas or populations affected by these health issues?
3. What specific actions should be undertaken to address these health issues?
4. What specific actions or collaborations could Methodist Hospital undertake to address these community health issues?

Following completion of the interviews, responses were analyzed and summarized based on general concepts and common themes.

## **Community's Top Health Issues**

The following were identified as the community's top health issues (based on frequency of overall mention):

- Access to health services and continuity of care
- Health conditions and disability

Each issue is discussed below.

### **Access to Health Services and Continuity of Care**

Several challenges related to access and continuity of care were identified during the community consultation, including:

- Lack of health insurance and cost of care
- Insurance plans accepted by providers
- Cost and timeliness of obtaining services and medications
- Use of 911 and hospital emergency rooms
- Difficulties receiving ongoing care due to lack of transportation, language barriers, costs of services and medications, and long wait times
- Difficulties navigating the healthcare system
- Lack of awareness of availability of needed health services
- Shortage of specialty physicians

Among the highlights:

- Clients need help signing up for appropriate health insurance plans (rather than relying on sources such as friends, insurance brokers, and/or the internet)
- High out-of-pocket expenditures for services – for office visits, prescriptions, and procedures – rather than having health insurance coverage
- Poor acceptance of “Obamacare cards” by community providers due to poor reimbursements results in limited care for some
- Improper use of 911 due to lack of insurance system (e.g., contact 911 for non-emergent situations primary care type visits)
- Improper use of hospital emergency rooms (“used like a clinic”) with no apparent financial obligations to those who do so
- Services received at urgent care centers are costly and may not result in needed continuity of care

- Some patients may experience long waits for care as they try to find a provider that meets their needs
- “Stigma or fear of going to the doctor,” particularly among some Asians/Pacific Islanders
- Lack of transportation may present access issues or difficulties keeping appointments for some Medi-Cal patients that require access to specialists in the surrounding communities
- Difficulties in continuity of care – such as annual exams – for transient clinic patients who cannot be reached by telephone or mail due to outdated or incorrect contact information
- Shortage of specialty physicians (due to retirements) and increasing costs of medical practices. Specific physician shortages in the community were identified for cardiology, orthopedics, ENT, and gynecology

Access to healthcare was identified as an important issue across for many age-related population groups, including: children, teens (specific to sexual health and sexually transmitted diseases), adults, and seniors. Comprehensive healthcare was identified as challenging for some children and seniors. According to a study mentioned by a contact, sixty percent of children have periodic and/or regular food insecurity. In the case of seniors, some cannot obtain health appointments in a timely manner, navigate the system’s complexity (including who seniors need to talk to and/or who will pay for needed services and items), face challenges associated with sight, hearing, mobility and access to transportation; and experience difficulties obtaining some needed items, such as in-home toilet and shower accommodations, in a timely manner. In addition, access to healthcare was mentioned as an important issue regarding women’s health and homelessness.

Those contacted for responses to healthcare issues related *specifically to cancer* provided similar comments related to access to care and continuity of care. Among the highlights:

- Lack of health insurance and/or cost of care
- Health insurance coverage for some specialty care services at certain facilities
- Limitations with some health insurance plans (i.e., HMO) in obtaining second opinions
- Physicians spend less time with patients because of reimbursement pressures
- Some clients of community organizations are not familiar with what’s available and what’s offered related to cancer services
- Mono-lingual Chinese-speaking patients would benefit from Chinese speaking providers as well as print/electronic materials in Chinese
- Some patients do not have transportation from their homes to cancer-related services and/or lodging near where they travel to receive care
- Some patients would benefit from support groups in multiple locations across the San Gabriel Valley
- Some patients and families require psychosocial and other support as families struggle with care at home (e.g., maintaining a job, paying rent, cooking, childcare)

## **Health Conditions and Disability**

Many of those interviewed identified the importance of health awareness, education, disease prevention, and medications management. In addition, several of those interviewed during the community consultation highlighted challenges related to age (older adults), gender, race/ethnicity, and cultural and generational differences in managing health conditions and disabilities. The following health conditions were specifically identified as particularly prevalent across the community:

- Diabetes
- High blood pressure
- Heart disease and stroke
- Cancer – breast, prostate, lung, colorectal, and liver
- Social isolation and lack of social networks
- Depression and suicide
- Memory, dementia, and Alzheimer’s disease
- Parkinson’s Disease
- Sexual health and sexually transmitted diseases
- Mental health associated with homelessness
- Influenza and pneumonia (seasonal emphasis)
- Falls
- Obesity and malnutrition
- Smoking and vaping

## **Neighborhood Areas or Populations Most Affected by Health Issues**

According to many of those interviewed, persons of all ages across the greater San Gabriel Valley, regardless of income or racial/ethnic and cultural backgrounds are affected by these health issues. Neighborhood areas in Methodist Hospital's service area specifically mentioned as most affected by the identified health issues include:

- Arcadia
- Alhambra
- Duarte
- El Monte
- Monrovia
- San Gabriel
- Temple City

Specific demographic sectors most affected and identified by interviewees:

- Lower socioeconomic status
- Lower educational attainment
- Chinese immigrant families with limited English proficiency
- Spanish-speaking persons
- Racial and ethnic minorities – Asians, Latinos, and African Americans
  - Chinese persons with lung, colorectal and liver cancers
  - Chinese women with breast cancer diagnosis
  - African American women with breast cancer
  - African American men with prostate cancer
  - Latinos with diabetes
- Children and adolescents
- Women
- Seniors
- Homeless persons

## **Specific Actions to Take to Address Health Issues**

Participants in the community consultation identified specific actions that could be undertaken to address health issues, including:

### **Access to Health Services and Continuity of Care**

- Financial assistance (including reduced costs)
- Reduced paperwork and duplication
- More effective and efficient coordination of community resources for vulnerable communities
- Reduce defensive medicine that is practiced in response to medical liability issues
- Use of health navigators
- Improve access to care e.g., transportation and language services
- Public education on topics such as financial assistance and insurance copayments/deductibles
- Make housing arrangements for homeless people

### **Health Conditions and Disability**

- Additional partnering of healthcare organizations with community organizations to bring needed programs and services to community places
- Identify and address root causes of health conditions and disability
- Promote awareness of healthy lifestyles, including staying physically active, eating properly, flu shots, stress management, and when to go to the doctor
- Provide communication on when and what cancer sites to be screened for
- Increase awareness of supplemental food programs for school-age children
- Reach out to underserved geographic areas in the San Gabriel Valley
- More information, education, health fairs, and events in Chinese (e.g., speaking engagements, seminars, workshops, health newsletters, and websites)
- Outreach and materials that are culturally sensitive to the Asian community
- Additional community outreach to PTAs, work places, and churches/temples
- Conduct more activities that are consistent with healthcare awareness calendar
- More opportunities in the community to check blood pressure
- Additional psychosocial support for cancer patients, families, and caregivers
- Provide mental health services that address prevention, healing, and stress management

## **Collaborative Roles or Actions Methodist Hospital Could Take to Address Community Health Issues**

Several of those interviewed complimented Methodist Hospital on its efforts to provide healthcare services to the community, commenting that “the Hospital is doing a lot now” and “doing a great job with community outreach and cancer awareness programs” through efforts such as participation in health fairs and partnerships with area community and senior centers.

Participants in the community consultation offered the following suggestions for collaborative roles or actions for Methodist Hospital:

- Recruit more staff, liaisons, and volunteers that speak Mandarin
- Offer assistance with health insurance plan signups
- Increase outreach to women
- Offer comprehensive women’s health services to include physical, mental, dental, and preventive care (e.g., mammograms, osteoporosis, pap smears)
- Continue outreach to senior centers to address health conditions and disability
- Partner more with government, non-profits, and community organizations
- Increase efforts to identify individuals with high blood pressure
- Offer diabetes clinics
- Provide education and awareness programs to prepare patients for physician visits, use of emergency rooms, and paramedics (911)
- Better electronic communication with other healthcare entities to reduce unnecessary efforts
- Offer telemedicine services
- Provide in-home post hospital follow-up services (by nurse practitioners and physician assistants)

### *Specific to Cancer:*

- Transportation services
- Resources in various languages
- Interpreters
- Patient navigators, nurses, MDs, and social workers to address full spectrum of care
- Education and awareness programs for various cancer sites, such as breast, colorectal, gynecological
- Low cost or free cancer screenings for a limited number of people (such as first 100 people)
- Cancer Resource Center to provide information about financial assistance programs and foundations

# Section 11: Priority Community Health Needs

This section includes:

---

- Description of the process and criteria used to identify priority community health needs
- Summary and description of priority community health needs

Additional information regarding Methodist Hospital Service Area can be found in:

---

- Section 3: Service Area Definition and Demographics
- Section 4: Health Access and Utilization
- Section 5: Mortality
- Section 6: Maternal and Infant Health
- Section 7: Child and Adolescent Health
- Section 8: Adult Health
- Section 9: Senior Health
- Section 10: Community Consultation
- Section 12: Existing Healthcare Facilities and Resources

## **Process and Criteria Used**

In preparing the community health needs assessment, Methodist Hospital combined quantitative data about service area demographics, availability of health insurance, health access to and utilization of key services, health status, and health behaviors with qualitative data, including opinions regarding important health issues from community leaders. Many who provided these opinions – including community health providers and representatives from Los Angeles County Departments of Public Health – have been active locally offered valuable perspectives on healthcare in the community.

The following criteria were used to identify and prioritize significant health needs in the community:

- Healthy People 2020 metrics
- Number of persons affected
- Identification and/or validation as an important health issue by community leaders
- Identified by community organizations as an opportunity to work collaboratively to address health issue

## **Priority Community Health Needs**

The following priority health needs were identified in the community health needs assessment:

- Access to health services and continuity of care
- Disease prevention and health promotion

Dimensions of each of these priority health needs are highlighted below.

### **Access to Health Services and Continuity of Care**

- Availability of health insurance (0 to 64 years), particularly adults 18 to 64 years
- Insurance plans accepted by providers
- Flu shots for older adults
- Language barriers faced by monolingual Chinese-speaking adults
- Usual source of ongoing care, particularly adults 18 to 64 years
- Delays in getting medical care
- Navigation and support services for cancer patients

### **Disease Prevention and Health Promotion**

- Diabetes
- High blood pressure
- Heart disease and stroke
- Cancer
- Influenza and pneumonia
- Falls
- Mental health and dementia

## **Section 12: Health Facilities and Other Resources**

This section includes:

---

- Summary and listing of health facilities and other resources located in Methodist Hospital's Service Area

## **Health Facilities and Other Resources**

In the ZIP codes comprising Methodist Hospital's service area, there are 12 open hospitals (ten general acute care hospitals and two acute psychiatric hospitals), 29 licensed free and community clinics, and two rehabilitation clinics. See page 3 of this section for **Summary of Health Facilities, by ZIP Code**.

There are 12 senior centers serving various cities in the hospital service area. See page 5 of this section for **Summary of Senior Centers, by ZIP Code**.

**Summary of Health Facilities, by ZIP Code**

Facilities Located in Methodist Hospital Service Area

June 30, 2019

Facility Name	Address	City	ZIP	Facility License Category	Hospital Detail		Status

**Notes:**

Data is updated as of June 30, 2019

EMS = Emergency Medical Services available at hospital facility; designation may be basic or comprehensive (noted as COMP)

Beds = Total number of beds

A **free clinic** is defined as a clinic operated by a tax-exempt, nonprofit corporation supported in whole or in part by voluntary donations, bequests, gifts, grants, government funds or contributions, that may in the form of money, goods, or services. Patients are not charged for services rendered or for drugs, medicines, appliances, or apparatuses furnished.

A **community clinic** is defined as a clinic operated by a tax-exempt corporation that is supported and maintained in whole or in part by donations, bequests, gifts, grants, government funds or contributions, that may be in the form of money, goods, or services. Any charges to the patient shall be based on the patient's ability to pay, utilizing a sliding fee scale.

A **rehabilitation clinic** is defined as a clinic that, in addition to providing medical services directly, also provides physical rehabilitation services for patients who remain less than 24 hours. Rehabilitation clinics shall provide at least two of the following rehabilitation services: physical therapy, occupational therapy, social, speech pathology, and audiology services.
